

DAMAGE IS ENORMOUS

Terrific Blast in New York Harbor.

LOSS IS \$25,000,000

War Material for Entente Allies Is Destroyed.

New York, July 31.—Property loss estimated at \$25,000,000 was caused by a series of terrific explosions of ammunition awaiting shipment to the entente allies and stored on Black Tom Island, a small strip of land jutting into New York bay, off Jersey City. Officials are investigating charges that the fire was a result of a plot.

The loss of life is problematical. It will not be determined definitely until there has been opportunity to check up the workmen employed on the island and on boats moored nearby.

Three are known to be dead and at least five more are missing. Scores of persons were injured, some of them probably mortally.

The detonations—felt in five states—began with a continuous rapid fire of small shells, the blowing up of great quantities of dynamite, trinitrotoluene and other high explosives, followed by the bursting of thousands of shrapnel shells which literally showered the surrounding country and waters for many miles around.

Fire that started soon after the first great crash, which spread death and desolation, destroyed thirteen of the huge warehouses of the National Storage company on Black Tom Island, in which was stored merchandise valued between \$12,000,000 and \$15,000,000.

The flames, shooting into the clouds were reflected against New York's skyline of towering office buildings, which only a few moments before had been shaken to their foundations as if by an earthquake.

Miles of streets in Manhattan alone were strewn with broken glass and shattered signs.

Early reports of heavy loss of life were impossible of verification and the authorities asserted the number of deaths probably will be small.

It was said that owing to the extent of the wreckage it might be several days before the exact figures could be obtained.

Statue of Liberty Damaged.

Every window in the pedestal of the Statue of Liberty on Bedloe's Island was broken and the main door, made of iron and weighing almost a ton, was blown off its hinges. The statue was not damaged. The famous "Light of Liberty" burned steadily throughout the hours of the conflagration, flaming high above the pall of smoke.

Captain A. B. Frye, supervising engineer of the federal buildings in New York, said the loss to buildings on Ellis Island could not exceed \$50,000.

Most of the damage at the immigration station was caused by the force of the explosion, which wrecked walks and buildings and shattered windows and doorways. Two barges, ablaze and laden with shrapnel shells, had drifted to the island from the scene of the disaster.

A municipal fireboat and tug aided Ellis Island employees to fight the fire. An explosion on one of the barges damaged the structure housing the power plant. Two other fire swept craft grounded on the southwest corner of the island. The medical staff removed the 450 immigrants on the island to the battery.

The cause of the disaster has not been determined. Officials of the National Storage company and the Lehigh Valley railroad, which also suffered heavily, through loss of property, declared, however, that reports to them showed a fire started on a barge belonging to an independent towing company that had been moored alongside a dock used by the railroad company to transfer ammunition shipments from trains to vessels in the harbor.

The barge, it was said, was there without authority either of the railroad or the storage company. The officials refused to disclose the name of the independent towing company, saying they were investigating "to ascertain whether the barge purposely had been set on fire as the result of a plot."

Gladstone and Disraeli.

It was Gladstone's opinion that Disraeli was not vindictive, and he ought to have known. He said so to a friend of mine, adding, "I don't think he dislikes me, for instance."—E. S. Nadai in Outlook.

ALLIED ARMIES ARE ACTING IN CONCERT

London, July 31.—British and French forces fighting against the Germans in the Somme region of France have again launched violent attacks and have made good progress, while the Russians in Volhynia in the region of the Stokhod river have forced the Germans to give further ground before their advance.

To the north of the Somme the trenches between Hill 139 and the river near Hardecourt have been captured by the French on a depth from 300 to 400 meters and in addition the French have pressed forward to the outskirts of the village of Maupas east of Harcourt and also captured positions north of Hem, which lies to the south of Maupas, and held them against violent German counter attacks.

Driving ahead, with the French on their right flank from Delville wood to the Somme, the British made an advance on the entire line and also made further progress against the Germans east of Waterlot farm, Trones wood and Maltrot farm.

INTERMENT LIKELY FOR CREW OF APPAM

Washington, July 31.—Interment of the German prize crew of the liner Appam until the end of the war, state department officials said informally, probably will follow the federal court's decision at Norfolk awarding the captured ship to her British owners.

In the absence of both Secretary Lansing and Counselor Polk, however, officials were reticent about discussing the legal and diplomatic problems involved in the decision. Assistant Secretary Phillips said he expected the German government would promptly raise the diplomatic questions, particularly in regard to the disposition of the prize crew.

Diplomatic exchanges concerning the vessel itself probably will be delayed until the case finally is disposed of in the courts.

Police Suspect Anarchists.

Berlin, July 31.—Reports of a great conflagration at Petrograd, in which a bridge across the River Neva, twelve large steamers, including several transatlantic liners, and the Pull-off gun works and other establishments, were destroyed, are printed in the Lokal Anzeiger. The police suspect that the conflagration was the work of anarchists.

Russian Official Confident.

Petrograd, July 31.—The present strategic situation gives ground for the conviction that a complete victory in the European war will be won by the entente allies, declares General D. S. Chouvaieff, the minister of war, in a statement made on the military situation at the close of the second year of the struggle.

Americans Must Come Home.

Washington, July 29.—American Ambassador Page in London cabled the state department that Great Britain insists on excluding from England and Ireland Thomas Hughes Kelly of New York, treasurer of the Irish relief fund; his assistant, Joseph Smith, and Mrs. Kelly.

BIG ONTARIO FOREST FIRES ARE STOPPED BY HEAVY RAINS

Toll of Human Lives Great, 194 Bodies Recovered—Black Tom Island Explosion Unsolved

Mexican Bandits Kill United States Troopers in Running Fight—English Advances Reported

Biggest Forest Fire in History Ontario Now Under Control

(By United Press)

Montreal, July 31.—Reports at noon today from North Bay, Ontario, say that 194 bodies have been recovered from the forest fire district, and that the fire has been completely quenched by rain. Railway communication expected to resume this afternoon.

Toronto, July 31.—The biggest forest fire in the history of Ontario province is still raging, 200 reported as having been killed. Much territory between Cochran and Hearst has already been burned over and timber worth millions believed to have been destroyed, a dozen towns and villages being in the zone but telegraphic communication has been destroyed so that details and the fate of the people in these places is not known. Between the two towns He Iroquois Falls, Kuskha, Wathabag, and Nelson, all in the destroyed area.

Montreal, July 31.—All villages in the path of the fire were wiped out, the high winds adding to its velocity.

Great Northern Road Promotions Announced

(By United Press)

St. Paul, July 31.—Great Northern promotions announced today are: C. E. McLaughlin becomes superintendent of the Minot division, succeeding F. D. Kelsey who becomes assistant general superintendent of the central district with headquarters at Great Falls, Mont. R. A. McCandless becomes superintendent of the Dakota division with headquarters at Grand Forks. G. E. Votaw succeeds McCandless as superintendent of the Butte division.

Mystery Still Stands Cause of Explosion

(By United Press)

New York, July 31.—The mystery regarding the cause of the explosion and fire at Black Tom Island on Sunday is still unexplained. Whether it started on the barge loaded with nitro allulose or from the ignition of four freight cars loaded with high explosives no one seems to know. At 8 o'clock today the flames are still soaring from the wreckage of the railway cars and scarpnel and other shells buried deep in the ruins are occasionally exploding. Only two are known to be dead, but 25 persons are missing. The property damage to New York, Black Tom Island, Jersey City and elsewhere from the giant convulsion is \$19,500,000. There are 17 warehouses, six piers, four barges, one tug boat, 85 freight cars many of which were loaded with munitions, which were destroyed.

New York, July 31.—The latest estimates this afternoon—four bodies found and 23 missing. The carelessness of railway officials in storing munitions is being investigated. Boxes of dynamite hurled into the water by the explosion and still floating is a great danger to shipping.

Deutschland Likely to Depart Tonight

(By United Press)

Baltimore, July 31.—The tug Timmons began clearing away the barges in readiness for the Deutschland to depart tonight. The Bremen may arrive at the same time.

More Fires North

(By United Press)

St. Paul, July 31.—More forest fires are reported in Koochiching county.

U. S. Troopers Killed by Mexican Brndits

(By United Press)

El Paso, July 31.—Two troopers of the Eighth United States cavalry were killed during a running fight with Mexican bandits near Ft. Hancock early today, five Mexicans being killed and one American wounded. The bandits were surprised by the cavalry patrol and immediately fled towards the border, 200 shots being exchanged. It is supposed the bandits were Villistas enroute to raid some American ranch.

El Paso, July 31.—Private John J. Twomey, troop F, and customs inspector Robert Wood, were the Americans killed.

Militiamen Must Stay at Least Three Months

(By United Press)

El Paso, July 31.—According to training orders it is believed that the militiamen must stay at the border at least three months.

Investigate Strike

(By United Press)

St. Paul, July 31.—The state labor department is to investigate the Mesaba range strike, and Labor Commissioner Houk conferred with Gov. Burnquist today to that end.

Heat Wave Broken

(By United Press)

St. Paul, July 31.—The heat wave is broken and cool breezes bring the temperature to 66 this morning.

TAKE GERMAN POSITIONS

(By United Press)

Paris, July 31.—The violent German attacks along the Somme around Monach and Hem Woods have been checked with a terrible loss to the Germans. The French are consolidating and strengthening the positions which they won yesterday north of Somme in the sweep forward which took the German positions along nearly the four mile front.

TAKE GROUND FROM TEUTONS

(By United Press)

Petrograd, July 31.—After fierce fighting the Russians around Brody push their way forward taking the ground from the Teutons up to the rivers Graberki and Seret.

BRITISH CAPTAIN IN PIRATE CLASS

Berlin, July 29.—The execution at Zebrugge of Captain Charles Fryatt of the British steamship Brussels, after trial by courtmartial for attempting to ram a German submarine, denotes a new phase in the controversy over the sea rights of merchantmen.

The German government prize regulations issued before the beginning of the war adopted the principle that merchantmen were not entitled to commit acts of war and it threatened to treat as pirates those attempting to do so.

The execution of Captain Fryatt, German officials contend, is in accord with that principle, which according to the German view merely extends to sea warfare the principles already controlling Franc-Tireur activity on land.

It is hoped in official circles here that this case will lead to a definite clearing up of the question of merchantmen acting at intermittent times as war vessels.

BAKER EXPLAINS HOW TROOPS WENT SOUTH

Washington, July 31.—In response to house resolutions of inquiry Secretary Baker made a report on the transportation of national guardsmen to the border.

The resolution asked for information on charges that the guardsmen had been transported in day coaches, that their trains had been unreasonably sidetracked and that they were insufficiently fed and cared for. Secretary Baker says the guardsmen in some instances were transported in day coaches, but that troop trains were not sidetracked unreasonably. Regular army rations more than sufficient for the journey were furnished all troops, he asserted, and that all cars used were inspected to remedy defects or deficiencies that would imperil health or safety of troops.

The report says day coaches were used only in cases where it was not practical to delay. When day coaches were used, it explains, three men were assigned to each four seats. In some cases railroads without extra charge allowed two men to occupy four seats.

FURTHER BRITISH ADVANCES

(By United Press)

London, July 31.—Gen. Haig reports further British advances at points north of Bazentine Lepetit. The night was spent improving the positions taken yesterday.

BANK ROBBERS KILL TWO MEN

Shoot Down Pursuers Who Attempt to Capture Them.

Sydney, Neb., July 29.—The Nebraska State bank at Sunol, near here, was robbed of \$1,200 by two robbers who locked Cashier W. C. Smith in the vault and in making their escape killed Ira Paul and Paul Vacik, who tried to capture them.

Later the robbers were captured by a posse led by Sheriff McDaniels of Sydney. They gave the names of J. W. S. Parnell and I. G. Lucas.

FIRES TAKE HEAVY TOLL

Forests Blazing in Northern Ontario.

TWO HUNDRED PERISH

Flames Trap People in Number of Settlements.

Englehart, Ont., July 31.—Forest fires raging in Northern Ontario are believed to have resulted in the loss of from 150 to 200 lives.

Other scores of persons have been injured and it is feared many of them will die.

Several small towns have been wiped out by the flames that have been raging for forty-eight hours. Reports thus far received show that fifty-seven perished at Nushka, a French-Canadian settlement, and thirty-four at Matheson.

Cochrane has eighteen dead and thirty-four injured; Iroquois Falls has fifteen dead and many injured and Ramore fifteen dead.

The number killed at Porcupine Junction is not known, but the entire town was destroyed except the railroad station.

The death list will be materially increased, it is feared, by victims in outlying districts. There are apparently well authenticated reports that many prospectors have been trapped at Tashota and Kowash.

One farmer and his ten children are known to have been burned, while the man's wife was vainly seeking aid to check the onrush of the flames.

Nushka, a hamlet consisting of a score of frame buildings and stores, suffered worst. It had been threatened for several days, but the residents lingered in the hope they might save their homes.

They waited too long, however, and walls of fire cut off escape.

A nearby lake in which they found refuge saved many residents of Cochrane on the line of the Temiskaming and Northern Ontario railway. Only two streets in the town were saved.

Thirty-four bodies are lying on the platform of the railroad station at Matheson. The station and two houses are the only two buildings standing. Ramore, a small settlement, was wiped out.

The flames were checked at Timmons after seventeen houses had been burned. Only the station was destroyed at South Porcupine.

All that remains of Iroquois Falls are the ruins of the great paper mill and one store.

REV. T. J. GIBBONS, ST. PAUL PRIEST, DEAD

St. Paul, July 31.—Rev. Thomas J. Gibbons, vicar general of the archdiocese of St. Paul and pastor of the new cathedral, died at St. Joseph's hospital of acute infection of the gall bladder and pancreas.

The news of his death came as a distinct shock to the entire city, because of his extremely good health recently. He was well known in Catholic circles throughout the state.

His death followed a hurried operation at St. Joseph's hospital Saturday night for acute infection of the gall bladder. Following the operation he sank slowly without fully regaining consciousness from the ether used in the operation.

Members of the Cathedral clergy were present at his bedside when he died.

Father Gibbons was one of the most prominent men in the archdiocese and he was prominently mentioned as successor to Rev. John J. Lawler, auxiliary bishop at St. Paul, who was transferred to Lead, S. D.

Father Gibbons was fifty-six years old. He was born at Mount Carmel, Pa.

TWO DIE IN 200-FOOT DROP

Two Others Injured When Automobile Goes Over Colorado Cliff.

Colorado Springs, Colo., July 31.—Mr. and Mrs. H. J. Bachman of Wichita Falls, Tex., were killed; a daughter, Miss Stella Bachman, eighteen years old, was injured seriously, and a son, H. J. Bachman, Jr., was bruised severely when the automobile in which they were riding plunged over a 200-foot embankment on the Canyon City road, ten miles south of Colorado Springs. The car left the road at a sharp curve.

CANADIAN HIGHLANDERS ON WILSON'S FRONT

MEDAL WINNERS OF 13th CANADIAN BATTALION

Canadians have done more than their duty in the great drive on the western front, as they have done all through the war. These two pic-

tures show some of the men who have made the name feared in the German trenches. Germans sneered

at the first highlanders, but they quit that after they had felt the Canadian highlanders.

Two Others Injured When Automobile Goes Over Colorado Cliff.

Colorado Springs, Colo., July 31.—Mr. and Mrs. H. J. Bachman of Wichita Falls, Tex., were killed; a daughter, Miss Stella Bachman, eighteen years old, was injured seriously, and a son, H. J. Bachman, Jr., was bruised severely when the automobile in which they were riding plunged over a 200-foot embankment on the Canyon City road, ten miles south of Colorado Springs. The car left the road at a sharp curve.

**WILSON TAKES
POSITIVE STAND**

Sends Strong Note to Britain
on Blacklist.

MENACES AMERICAN TRADE

Wording of Document is Even More Forceful in Its Tone Than Officials Have Intimated—Says Serious Consequences Are Likely to Follow.

Washington, July 31.—Great Britain is warned, in the American note of protest against the blacklist, made public by the state department, of the many "serious consequences to neutral rights and neutral relations which such an act must necessarily involve." The American note is even more positive in its terms than officials have intimated.

Ambassador Page was instructed by Acting Secretary Polk to deliver it formally and textually. It follows, in part:

"The announcement that his Britannic majesty's government has placed the names of certain persons, firms and corporations in the United States upon a proscriptive 'blacklist' and has forbidden all financial or commercial dealings between them and citizens of Great Britain has been received with the most painful surprise by the people and government of the United States and seems to the government of the United States to embody a policy of arbitrary interference with neutral trade against which it is its duty to protest in the most decided terms.

"The scope and effect of the policy are extraordinary. British steamship companies will not accept cargoes from the proscribed firms or persons or transport their goods to any port and steamship lines under neutral ownership understand that if they accept freight from them they are likely to be denied coal at British ports and excludued from other privileges which they have usually enjoyed and may themselves be put on the blacklist.

"Neutral bankers refuse to answer to those on the list and neutral merchants decline to contract for their goods, fearing a like proscription. It appears that Britain officials regard the prohibitions of the blacklist as applicable to domestic commercial transactions in foreign countries as well as in Great Britain and her dependencies, for Americans doing business in foreign countries have been put on notice that their dealings with blacklisted firms are to be regarded as subject to veto by the British government.

An Instance of Hardship.

"By the same principle Americans in the United States might be made subject to similar punitive action, if they were found dealing with any of their own countrymen whose names had thus been listed. The harsh and even disastrous effects of this policy upon the trade of the United States appears that British officials regard and upon the neutral rights upon which it will not fail to insist are obvious.

"The government of the United States begs to remind the government of his majesty that citizens of the United States are entirely within their rights in attempting to trade with the people or the government of any nations now at war, subject only to well defined international practices and understandings which the government of Great Britain deems the government of Great Britain to have too lightly and too frequently disregarded.

"There are well known remedies and penalties for breaches of blockade where the blockade is real and in fact effective for trade in contraband for every neutral act by

whomsoever attempted.

"The government of the United States cannot consent to see these remedies and penalties altered or extended at the will of a single power or group of powers to the injury of its own citizens or in derogation of its own rights.

"There is no purpose or inclination on the part of the government of the United States to shield American citizens or business houses in any way from the legitimate consequences of unneutral acts or practices; it is quite willing that they should suffer the appropriate penalties which international law and the usage of nations have sanctioned; but his Britannic majesty's government cannot expect the government of the United States to put on an expedite blacklist without calling the attention of his majesty's government, in the gravest terms to the many serious consequences to neutral rights and neutral relations which such an act must necessarily involve.

"It hopes and believes that his majesty's government, in its natural absorption in a single pressing object of policy, has acted without a full realization of the many undesired and undesirable results that might ensue."

Hundreds Watch Gun Battle.
Alton, Ill., July 31.—Between 300 and 400 persons witnessed a fight between two negroes and members of the police force. One of the negroes was killed.

SLEEPING NEAR DEATH.

Naps That Might Have Landed These Who Took Them In Eternity.

A short time ago a man was discovered in his lunch hour fast asleep on a plank. His arms were hanging down, one on each side of the board, which was about a foot wide. He was snoring gloriously and quite carelessly, whether awake or asleep, that if he turned over for greater comfort he would "tumble out of bed" 120 feet, for that plank was part of the scaffolding erected for the repair of a church spire!

A similar disregard for danger was reported lately during the erection of some electrical works. One of the men engaged on the tall chimney, missing his mate at the lunch hour, went up the half finished chimney to find him. He discovered him fast asleep on a narrow ledge of brick inside the shaft, a fall from which meant a drop of eighty feet.

On one occasion a circus arrived in a certain town not a hundred miles from London at an early hour after a long journey and a performance the previous night. As a consequence few of the company got any sleep. That day there was the usual procession and the afternoon performance. The lion tamer had had a very rough time because of the illness of one of his beasts.

The evening performance arrived, and this man had to pretend to go to sleep with his head on the body of a couchant lion, finishing up the performance by springing up and putting his head in another lion's mouth.

But when the jumping up time came a gentle snore was heard. The man was fast asleep with his head pillowed on a lion!—London Globe.

Military Rifles Remodeled.

Nations with large armies were often loath to discard their old weapons and frequently altered existing models to bring them up to date. Thus we note that England converted her old muzzle loading Enfields in 1864 and 1890 to use the Snider action with a metallic cartridge case. In 1886 Austria adopted the Mannlicher .433 caliber with a straight pull bolt action and a box magazine, loading from a steel clip.

Two years later the caliber was reduced to .315, using black powder. The sights of these rifles were regraduated in 1890 on the adoption of smokeless powder.—Outing.

Eagle and Snake.

The eagle will dive upon a snake whenever it gets the chance. The eagle usually swoops upon its prey, seizes it by the tail, bears it aloft and lets it fall. It never attacks it when coiled, but first drives it to flight by screams and the beating of its wings. The snake is either killed or stunned by the fall, whereupon the eagle carefully cuts off the head and devours the body which is usually very fat.

THREE SMUGGLED PRIZES.

The Angora Goat, the Tea Plant and the Rubber Tree.

There was a time when the Turkish government imposed the death penalty on persons caught trying to smuggle out of the empire the best breeds of Angora goats. In 1881 a Californian, Dr. Riley, bought four goats in Turkey, carried them on mules, camels and in closed carriages for some hundreds of miles, sheared off their luxuriant wool, rolled them in coal dust to make them look common and disreputable and escaped with the suitors' goats and a whole skin. The descendants of these goats are found on ranches in the west and southwest, crossed with Angoras from South Africa and other parts of the world.

Once the government of China and Japan guarded with similar jealousy the exportation of the tea plant. Some one escaped with some seed or cuttings, however, some forty years ago, and the original plantation of smuggled tea plants is still flourishing in South Carolina.

Fifty years ago Brazil was engaged in an effort to keep the rubber tree in confinement in that empire. The seed was smuggled to Ceylon, however, and for half a century East Indian planters have been perfecting the rubber tree until now the best plantations are there rather than in Brazil, and the Brazilians who want the best varieties send to Ceylon, Java and other Asiatic countries for their trees for planting.

The sultan lost his goat, the mandarins their tea and the dons their rubber trees—and in return Brazil has given the Asiatics the plague of the water hyacinth and the Mongolians have sent us the San Jose scale, the gypsy moth and several other pests.—Farm and Fireside.

WHEN A HORSE BALKS.

Don't Beat Him Nor Abuse Him, but Try This Simple Scheme.

In an article in Our Dumb Animals Alfred H. Pope says that the balky horse has the most sense and the confirmed runaway horse the least sense of any horse.

The balky horse is not to be cured by beating and abuse. When a horse makes up his mind to balk he has no room in his mind for anything else. Whipping only increases his stubbornness, but there is a method which goes to the cause of the trouble. With a single idea in his head it was reasoned that the best way to get the horse to move was to give him another idea—something else to think about.

The trainer then remembered that horses and mules resent interference with their liberty to move their ears at will. It was noticed that a horse never changes his course of action without moving his ears. It was then found that when a horse balked it annoyed him to have one ear pushed under the crown of the bridle so that he could not move it.

And it was also found that if the ear was left there for about twenty minutes he was so annoyed that he forgot about his determination to balk. He shook his head, turned to one side and then the other and made every effort to release the ear. This occupied his mind until when the driver ordered him to go he went. After a few minutes the ear was released and he went on as if he had forgot all about balking.

In conclusion the writer said, "This trick will not break a horse of balking, but it will invariably start one that has balked on the road, provided he hasn't already been whipped and abused to a point where nothing matters."

Old Age Due to Sleep.

Brillat-Savarin had two sisters who passed by far the greater part of their lives asleep, and both, thanks to the regime, nearly attained 100 years. These ladies lived at a country house belonging to the author of "La Physiologie du Gout," which he used only in September and October.

They remained in bed for ten months of the year, getting up two days before his arrival to prepare for him and living a normal life during his stay. On his departure they would say, "Adieu, au revoir, a l'année prochaine, nous allons nous coucher."

One of them died at the age of ninety-nine as she was finishing dinner, her last words being, "Hurry up with the dessert!"—Pearson's Week.

Forceful in Its Tone Than Officials
Have Intimated—Says Serious Con-
sequences Are Likely to Follow.

Washington, July 31.—Great Britain
is warned, in the American note of
protest against the blacklist, made
public by the state department, of the
many "serious consequences to neu-
tral rights and neutral relations
which such an act must necessarily
involve." The American note is even
more positive in its terms than offi-
cials have intimated.
Ambassador Page was instructed
by Acting Secretary Polk to deliver
it formally and textually. It follows,
in part:
"The announcement that his Britan-
nic majesty's government has framed
the names of certain persons, firms
and corporations in the United States
upon a proscription 'blacklist' and has
forbidden all financial or commercial
dealings between them and citizens
of Great Britain has been received
with the most painful surprise by the
people and government of the United
States and seems to the government
of the United States to embody a pol-
icy of arbitrary interference with
neutral trade against which it is its
duty to protest in the most decided
terms.
"The scope and effect of the policy
are extraordinary. British steamship
companies will not accept cargoes
from the proscribed firms or persons
or transport their goods to any port
and steamship lines under neutral
ownership understand that if they ac-
cept freight from them they are likely
to be denied coal at British ports
and excludod from other privileges
which they have usually enjoyed and
may themselves be put on the black-
list.
"Neutral bankers refuse to answer
to those on the list and neutral mer-
chants decline to contract for their
goods, fearing a like proscription. It
appears that Britain officials regard
the prohibitions of the blacklist as
applicable to domestic commercial
transactions in foreign countries as
well as in Great Britain and her de-
pendencies, for Americans doing busi-
ness in foreign countries have been
put on notice that their dealings with
blacklisted firms are to be regarded
as subject to veto by the British gov-
ernment.

An Instance of Hardship.
"By the same principle Americans
in the United States might be made
subject to similar punitive action if
they were found dealing with any of
their own countrymen whose names
had thus been listed. The harsh and
even disastrous effects of this policy
upon the trade of the United States
appears that British officials regard
and upon the neutral rights upon
which it will not fail to insist are
obvious.
"The government of the United
States begs to remind the government
of his majesty that citizens of the
United States are entirely within
their rights in attempting to trade
with the people or the government of
any nation now at war, subject only
to well defined international prac-
tices and understandings which the
government of the United States
deems the government of Great Brit-
ain to have too lightly and too fre-
quently disregarded.
"There are well known remedies
and penalties for breaches of block-
ade where the blockade is real and
in fact effective for trade in contra-
band, for export, or neutral act by
whomsoever attempted.
"The government of the United
States cannot consent to see these
remedies and penalties altered or ex-
tended at the will of a single power
or group of powers to the injury of its
own citizens or in derogation of its
own rights.
"There is no purpose or inclination
on the part of the government of the
United States to shield American citi-
zens or business houses in any way
from the legitimate consequences of
unneutral acts or practices; it is quite
willing that they should suffer the ap-
propriate penalties which international
law and the usage of nations have
sanctioned; but his Britannic majes-
ty's government cannot expect the
government of the United States to
consent to see its citizens put on an
exparte blacklist without calling the
attention of his majesty's govern-
ment, in the gravest terms to the
many serious consequences to neutral
rights and neutral relations which
such an act must necessarily involve.
"It hopes and believes that his
majesty's government, in its natural
absorption in a single pressing object
of policy, has acted without a full
realization of the many undesired and
undesirable results that might ensue."

Military Rifles Remodeled.
Nations with large armies were often
bath to discard their old weapons and
frequently altered existing models to
bring them up to date. Thus we note
that England converted her old muzzle
loading Enfields in 1864 and 1890 to
use the Snider action with a metallic
cartridge case. In 1895 Austria adopt-
ed the Mannlicher 433 caliber with a
straight pull bolt action and a box
magazine, loading from a steel clip.
Two years later the caliber was re-
duced to 315, using black powder. The
sights of these rifles were regraduated
in 1890 on the adoption of smokeless
powder.—Outing.

Eagle and Snake.
The eagle will dive upon a snake
whenever it gets the chance. The eagle
usually swoops upon its prey, seizes it
by the tail, bears it aloft and lets it
fall. It never attacks it when coiled,
but first drives it to flight by screams
and the beating of its wings. The
snake is either killed or stunned by the
fall, whereupon the eagle carefully cuts
off the head and devours the body,
which is usually very fat.

THREE SMUGGLED PRIZES.
The Angora Goat, the Tea Plant and
the Rubber Tree.
There was a time when the Turkish
government imposed the death penalty
on persons caught trying to smuggle
out of the empire the best breeds of
Angora goats. In 1881 a Californian,
Dr. Riley, bought four goats in Turkey,
carried them on mules, camels and in
closed carriages for some hundreds of
miles, sheared off their luxuriant wool
rolled them in coal dust to make them
look common and disreputable and es-
caped with the sultan's goats and a
whole skin. The descendants of these
goats are found on ranches in the west
and southwest, crossed with Angoras
from South Africa and other parts of
the world.
Once the government of China and
Japan guarded with similar jealousy
the exportation of the tea plant. Some
one escaped with some seed or cuttings,
however, some forty years ago, and
the original plantation of smuggled tea
plants is still flourishing in South Caro-
lina.
Fifty years ago Brazil was engaged
in an effort to keep the rubber tree in
confinement in that empire. The seed
was smuggled to Ceylon, however, and
for half a century East Indian plant-
ers have been perfecting the rubber
tree until now the best plantations are
there rather than in Brazil, and the
Brazilians who want the best varieties
send to Ceylon, Java and other Asiatic
countries for their trees for planting.
The sultan lost his goat, the manda-
rins their tea and the dons their rubber
trees—and in return Brazil has given
the Asiatics the plague of the water
hyacinth and the Mongolians have sent
us the San Jose scale, the gypsy moth
and several other pests.—Farm and
Fireside.

SLEEPING NEAR DEATH.
Naps That Might Have Landed These
Who Took Them in Eternity.
A short time ago a man was discov-
ered in his lunch hour fast asleep on a
plank. His arms were hanging down,
one on each side of the board, which
was about a foot wide. He was snor-
ing gloriously and quite careless, wheth-
er awake or asleep, that if he turned
over for greater comfort he would
"tumble out of bed" 120 feet, for that
plank was part of the scaffolding erect-
ed for the repair of a church spire!

A similar disregard for danger was
reported lately during the erection of
some electrical works. One of the men
engaged on the tall chimney, missing
his mate at the lunch hour, went up
the half finished chimney to find him.
He discovered him fast asleep on a
narrow ledge of brick inside the shaft,
a fall from which meant a drop of
eighty feet.
On one occasion a circus arrived in a
certain town not a hundred miles from
London at an early hour after a long
journey and a performance the previ-
ous night. As a consequence few of
the company got any sleep. That day
there was the usual procession and the
afternoon performance. The lion tamer
had had a very rough time because of
the illness of one of his beasts.
The evening performance arrived, and
this man had to pretend to go to sleep
with his head on the body of a couch-
ant lion, finishing up the performance
by springing up and putting his head in
another lion's mouth.
But when the jumping up time came a
gentle snore was heard. The man was
fast asleep with his head pillowed on a
lion!—London Globe.

Old Age Due to Sleep.
Brillat-Savarin had two sisters who
passed by far the greater part of their
lives asleep, and both, thanks to the
regime, nearly attained 100 years.
These ladies lived at a country house
belonging to the author of "La Physi-
ologie du Gout," which he used only in
September and October.
They remained in bed for ten months
of the year, getting up two days before
his arrival to prepare for him and liv-
ing a normal life during his stay.
On his departure they would say,
"Adieu, adieu, a l'année prochaine,
nous allons nous coucher."
One of them died at the age of ninety-
nine as she was finishing dinner, her
last words being, "Hurry up with the
dessert!"—Pearson's Weekly.

WHEN A HORSE BALKS.
Don't Beat Him Nor Abuse Him, but
Try This Simple Scheme.
In an article in Our Dumb Animals
Alfred H. Pope says that the balky
horse has the most sense and the con-
firmed runaway horse the least sense
of any horse.
The balky horse is not to be cured by
beating and abuse. When a horse
makes up his mind to balk he has no
room in his mind for anything else.
Whipping only increases his stubborn-
ness, but there is a method which goes
to the cause of the trouble. With a
single idea in his head it was reasoned
that the best way to get the horse to
move was to give him another idea—
something else to think about.
The trainer then remembered that
horses and mules resent interference
with their liberty to move their ears at
will. It was noticed that a horse never
changes his course of action without
moving his ears. It was then found
that when a horse balked it annoyed
him to have one ear pushed under the
crown of the bridle so that he could
not move it.
And it was also found that if the ear
was left there for about twenty min-
utes he was so annoyed that he forgot
about his determination to balk. He
shook his head, turned to one side and
then the other and made every effort
to release the ear. This occupied his
mind until when the driver ordered
him to go he went. After a few min-
utes the ear was released and he went
on as if he had forgot all about balking.
In conclusion the writer said, "This
trick will not break a horse of balking,
but it will invariably start one that has
balked on the road, provided he hasn't
already been whipped and abused to a
point where nothing matters."

The man with his
money in our Bank
does not fear fire
nor burglars.

It is not only downright carelessness to keep money
in your house, but it subjects you and your family to
grave DANGER.

Not only may you lose it by fire, but burglars may
break in and steal it. Burglars always "spot" the
houses where money is kept and they will stop at noth-
ing—even MURDER—to get it.

Bank your money where it will be safe from fire, fire,
burglars or your own extravagance.

Put YOUR money in OUR bank.

Prevention of Infantile Paralysis

(U. S. Public Health Service)

To control the present epidemic of infantile paralysis, according to a statement issued by the United States Public Health Service today, the chain of infection between persons harboring germs of the disease and the well members of the community should be broken. Infantile paralysis is probably caused by a very minute organism found in the nasal, mouth and bowel discharges of those who have the disease or who are carriers of the germ without themselves suffering from the ailment. All of the steps in the spread of the infection are not known but if this germ can be prevented from passing from the infected to the well person, the disease will cease.

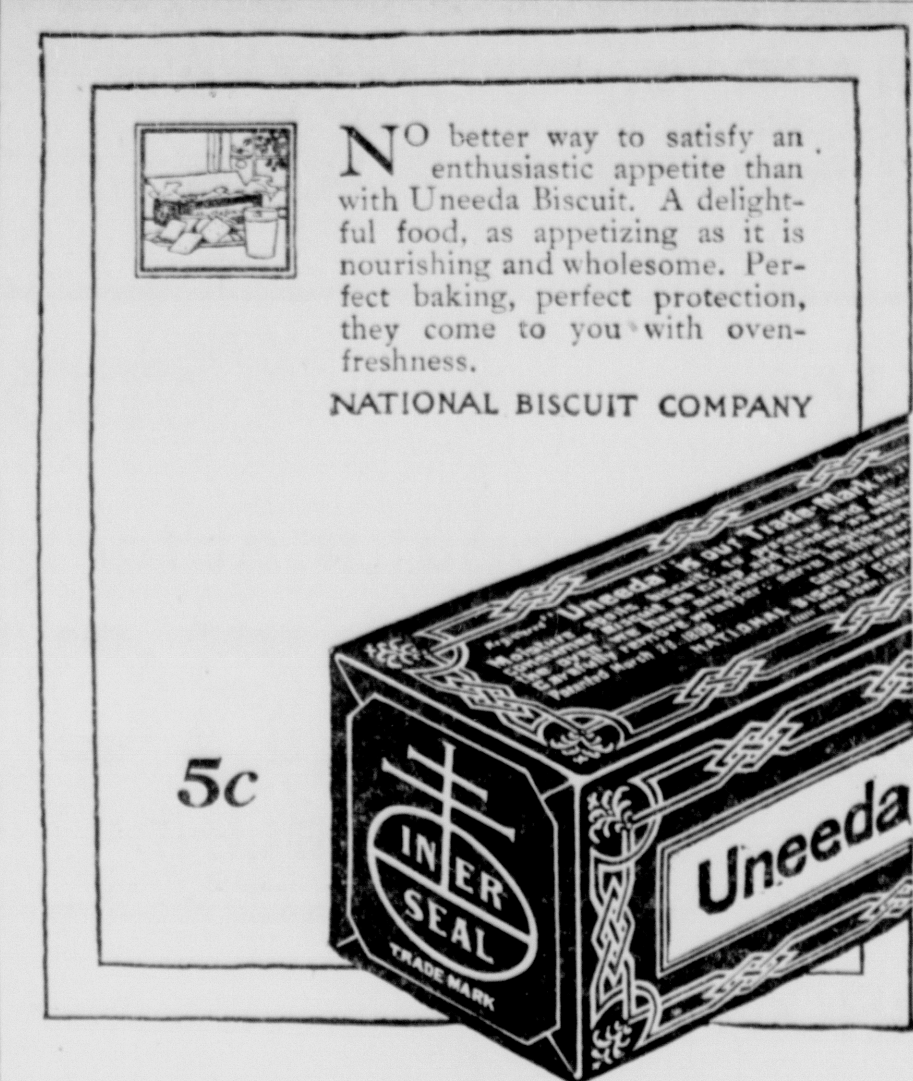

Infantile paralysis is not a disease of recent origin. Sporadic or scattered cases have occurred throughout the country for many years but it is only during the last decade that the infection has assumed epidemic proportions of the United States. The present epidemic in New York city, on account of its magnitude and virulence, has awakened the residents of many communities to the danger of the importation of the disease into their own midst. This danger is real, but if due precautions are exercised it is believed that the epidemic will subside.

The actual control of the present epidemic must be left to the city, state and federal health authorities. These organizations will properly quarantine and care for affected persons, prescribe sanitary measures and limit as may be necessary the travel of individuals in order to protect neighboring districts from the infection. Individuals and communities, however, can do much toward their own protection.

Poliomyelitis is probably spread directly or indirectly, through the medium of infective secretions. Account must therefore be taken by communities of every means by which such secretions are disseminated. Promiscuous expectoration should be controlled. The common drinking cup affords a method for the interchange of material of this nature and should therefore be abolished. Rigid cleanliness of glasses and utensils at soda fountains, in saloons and other public places, should be enforced. Flies, roaches and other vermin, by coming in contact with infective secretions, may possibly convey them to our food and thus directly bring about the development of disease. Therefore eliminate insects. Street and house dust bear a definite relation to the spread of many infections and it is not unreasonable to presume that they must be a factor in the dissemination of infantile paralysis. Maintain strict cleanliness of streets, yards and alleys in order to prevent the breeding of insects and other vermin. See that all garbage and waste are properly cared for and collected at regular and frequent intervals. Guard all food supplies, especially milk and other perishable products. Digestive troubles of children arising from the ingestion of food of questionable quality may lower resistance. Assemblies of children in infected localities are to be discouraged, if not actually forbidden. While the above measures are in a sense general, and applicable to many epidemic diseases, their importance should not be overlooked.

Individual preventive measures may be thus summarized: Summon a physician at once and immediately notify the health officer of the presence of the disease. If the disease is present in the community, medical aid should be sought whenever a child is sick no matter how light the illness; many cases of infantile paralysis begin with a slight indisposition. Should the illness prove to be infantile paralysis isolate the patient, place a competent person in charge, and reduce all communication with the sick room to a minimum. Hospital care is preferable, not only for the child but in order to better safeguard against the spread of the disease. The sick room should be well ventilated and screened. Nasal and mouth secretions should be received in cloths, placed in a paper bag, and burned. The clothing of the child, the bed linen, and the excretions should be disinfected in the same manner as for typhoid fever, that is by boiling, the long continued application of 5% carbolic, or other well recognized disinfectant. The same is true for dishes and drinking vessels. Nurses should exercise the same precautions as regards cleanliness of hands in caring for infantile paralysis patients as for those afflicted with other infectious diseases.

A child may convey the disease to

NATIONAL BISCUIT COMPANY

NO better way to satisfy an enthusiastic appetite than with Uneeda Biscuit. A delightful food, as appetizing as it is nourishing and wholesome. Perfect baking, perfect protection, they come to you with oven-freshness.

others even after a lapse of several weeks. For this reason quarantine should be maintained for a considerable period, usually from six to eight weeks, and the above precautions should be adhered to during this time. Disinfection of the room following recovery is advisable.

NEGLECTED SILO FIRE

Is a Serious Menace on the Farm, Says State Fire Marshal R. W. Hagarine, of St. Paul

A neglected silo is one of the most dangerous structures on the farm says R. W. Hagarine, state fire marshal.

The fire marshal is desirous of warning all farmers not to allow ensilage to remain too long confined. It develops an alcohol which not only is hard to combat, but it is a serious menace to those called upon to extinguish a silo fire.

Robert Carmichael, Dakota county farmer, and member of the legislature, had a serious experience with his silo that should be a warning to all farmers.

It was a wooden silo and contained over 200 tons of 1914 ensilage. July 3rd he discovered fire ensuing from the top, and upon investigation found fire all through the center from top to bottom. Sixty neighbors, working for 24 hours, helped him extinguish the blaze, and it was only by wetting down and throwing out the contents that the fire was controlled.

"It was the most stubborn blaze I ever saw," said Mr. Carmichael, "a man couldn't work in it but a few minutes before being overcome with fumes and reel about as though drunk. In fact, it was really burning alcohol. Advise farmers not to keep ensilage too long, nor put wet or green hay in a barn. Spontaneous combustion is no myth."

Brown-Luther

Walter R. Brown and Inez B. Luther, were united in matrimony this afternoon at the Congregational parsonage, Rev. G. Phil. Sheridan officiating. The ceremony was witnessed by Miss Ina R. Sheridan and Miss Sarah Robinson.

The Dispatch joins their many friends in best wishes.

Water Colors.

Pigments have been used from the earliest times and are now used by all savages for decorative purposes. But the paint used in Babylon and Nineveh and in Pompeii was composed of pigments mixed not with oil, but with water to which had been added a little glue, egg albumen or perhaps sometimes casein, which is albuminous matter from milk or the gluten from cereal grains. Glue, however, which was well known to the ancient Egyptians, was the most used binding material. Such paints are now known as fresco paints or water colors.

Not All Her Fault.

The new maid was untidy, and the mistress bore with her patiently at first. But on the third day she placed a very unclean dinner plate on the table, and patience broke down.

"Really, Harriet, you might at least see that the plates are clean."

"Well, mum," Harriet rejoined, "I owns to them thumb marks, but that dried mustard was there afore I come."

—London Tit-Bits.

Not Through the Roof.

"We lost our cook yesterday by the gasoline route."

"Do you mean that she poured it on the kitchen fire?"

"No. Another family lured her away by offering her the use of a fine motor-car."—Boston Transcript.

NEW PENSION PLAN

Swift & Co. Have Announced the Gift of \$2,000,000 to Their Employees as Follows

Swift & Co.'s gift of \$2,000,000 in the form of a pension to be distributed under a plan announced by them today is interesting. The announcement of the accumulation of the huge sum during the past six years in the form of a pension fund should be gratifying to the workers in the plants and branch houses in all cities where it was made simultaneously. The plan will become active August 1 and will make 30,000 men and women eligible. In Chicago alone 8,000 persons will come under the plan, which according to the statement of the company is a scheme for awarding faithful service.

The salient points of the plan as outlined in the formal announcement to employees follow:

1. The employees do not contribute to the fund.

2. Income from the \$2,000,000 foundation fund is to be supplemented annually by Swift & Company until the fund is large enough to meet the necessary demands.

3. More than 30,000 employees to benefit by the announcement.

4. Men in the employ of the company twenty-five years, who have reached the age of sixty may be pensioned.

5. Men in the employ of the company twenty-five years and who have reached the age of sixty-five shall be pensioned.

6. Women in service twenty-five years, who have reached the age of fifty may be pensioned.

7. Women in service twenty-five years, who have reached the age of fifty-five shall be pensioned.

8. Employees in service fifteen years and up to twenty-five years, who are permanently incapacitated for work may be pensioned.

9. Pension of those retired on account of age and length of service, or if incapacitated after a service of twenty-five years, but prior to the age of retirement, shall be one-half of the average salary for the five years preceding retirement.

10. Pension of those retiring on account of incapacity after from fifteen to twenty-five years of service shall be computed on a basis of 1 1/2% of the average salary for the five year period preceding retirement, for each year of continuous service.

11. No pension shall be less than \$240 per year.

12. No pension shall be in excess of \$5,000 per year.

13. The widow and children of an eligible employee shall receive one-half of the pension to which an employee shall be entitled at the time of his death.

They All Do.

Mother—Dickie, what do you want for a birthday present? Dickie—I want to be my own boss.

GOPHER STATE'S ROAD FUND WILL DOUBLE

Washington, July 31.—Minnesota's apportionment of funds for building roads under the federal good roads law will be double next year what it was this year. A recent announcement by the secretary of agriculture fixed Minnesota's share at \$142,394,000 for the fiscal year ending June 30, 1917.

The apportionment this year was a share of only \$5,000,000. Next year, Secretary of Agriculture Houston says, it will be \$10,000,000, with an increase of \$5,000,000 annually thereafter for three more years.

Different sums are appropriated for each year and the apportionment must take into consideration the population as shown by the latest available federal census and the mileage of rural delivery and star routes.

ARMY SCHOOL TO REOPEN

Leavenworth Institution Was Closed Latter Part of May.

Leavenworth, Kan., July 31.—Private telegrams received here from Washington said the army service schools at Fort Leavenworth will reopen Sept. 15. They were closed May 28 so that students and instructors could get to the Mexican border.

Ten Thousand See Execution.

Laredo, Tex., July 29.—Sanjago Ramirez, former governor of Coahuila and later a Villista general, has been executed on the plaza at Saitillo. Ten thousand saw the execution.

LIVING ROOM WALLS

CLUB MAKE THE

OFFICE ROOM

BEAVER BOARD

"How simple," you'll say when you have tried BEAVER BOARD for the first time, whether in a brand new house or an attic bedroom. It is simple because it gives you just what you want in a wall or ceiling, and it's so easy to apply. Beaver Board takes the place of lath, plaster and wallpaper. It makes a handsome, durable, sanitary wall which never chips or falls.

But there is a lot of difference between Beaver Board, the original, and the many so-called wallboards. So it will pay you to get the kind with the Beaver Board trade-mark on the back of every panel. That's the kind we sell.

Ask us about the Beaver Board Companies' Free Design and Decoration service. They will gladly help you plan your walls and ceilings.

TALKS ON BANKING

Four Kinds of Banking Institutions, Their Duties Described, Rules for Depositors

To the average person a bank is a bank—"a place to put money," and for all ordinary purposes this is enough to know, provided, of course, the bank is sound and worthy of confidence. It is well, however, to understand that there are different kinds of banks, and to know the distinguishing characteristics of each.

We have in this country four kinds of banking institutions: (a) National banks; (b) State banks; (c) Trust Companies; (d) Savings banks. All the foregoing receive money on deposit and pay it back again, as a rule, on demand; but the rules under which deposits are received differ. All the foregoing but the savings banks have capital stock and are owned and controlled by stockholders. Savings banks are of two kinds—stock savings banks and mutual savings banks. The difference between these will be noted later, the present talk will treat of national banks only.

National banks are under the direct supervision of the Comptroller of the Currency and are not subject to state laws except in the matter of taxes. In country districts they cannot organize with a capital of less than \$25,000, while in the larger places the capital requirements are greater. National banks do a general banking business, which consists of receiving deposits, paying checks and making loans. The one feature which distinguishes national banks from all others is the issue of national bank notes, which forms a large part of the circulating currency of the country. These notes are secured by the government bonds deposited with the Treasurer at Washington, and every national bank note is in reality part of a government bond, cut up into small denominations for convenience. Under the Federal Reserve Act these will ultimately be retired and the Federal Bank Notes will take their place, but it will be some years before this is accomplished.

The national banks were instituted after the civil war as agencies of the government, and were in reality organized under a plan which made a market for the government bonds. They are required to report to the Comptroller of the Currency five times a year without notice, the report dating back a few days for obvious reasons. They are also required to be examined twice each year without notice. The examiners go carefully into all the various details, particular into the loans, and are as conversant with the larger borrowers as the directors.

The national banking system has proven sound in its principles, efficient in its management, and satisfactory in all its operations. Under the Federal Reserve Act member banks may take promissory notes of a certain type and turn them into money in the course of a few hours, by rediscounting them at the Federal Reserve Bank, which is a valuable feature. This is not to say, however, that a national bank is better than any other type of institution but they have enjoyed long years of prosperity and able management, with little loss to their depositors.

FOOLING MARK TWAIN.

An Autograph Joke That Was Sprung Upon the Humorist.

George W. Cable had been giving readings from his wonderful Creole stories and had visited Mark Twain in Hartford. While there he had been taken down with the mumps, and it was during his convalescence that the plan for a combined reading tour had been made. This was early in the year; the tour was to begin in the autumn.

Cable, having quite recovered in the meantime, conceived a plan to repay Mark Twain's hospitality. It was to be an April fool—a great complimentary joke. A few days before the first of the month he had a "private and confidential" circular letter printed and mailed it to 150 of Mark Twain's friends and admirers in Boston, New York and elsewhere asking that they send the humorist a letter to arrive April 1 requesting his autograph.

It would seem that each one receiving this letter must have responded to it, for on the morning of April 1 an immense pile of letters was unloaded on Mark Twain's table. He did not know what to make of it, and Mrs. Clemens, who was party to the joke, slyly watched results. They were the most absurd requests for autographs ever written. He was fooled and mystified at first, then, realizing the nature and magnitude of the joke, he entered into it fully—delighted, of course, for it was really a fine compliment.

Some of the letters asked for autographs by the yard, some by the pound. Some commanded him to sit down and copy a few chapters from "The Innocents Abroad." Others asked that his autograph be attached to a check. John Hay requested that he copy a hymn, a few hundred lines of Young's "Night Thoughts," etc., and added:

"I want my boy to form a taste for serious and elevated poetry, and it will add considerable commercial value to have it in your handwriting."

Altogether the reading of the letters gave Mark Twain a delightful day.—Albert Bigelow Paine in St. Nicholas.

Destiny.

"Yes; John will go to Yarnell. The arrangements are practically completed. His room will be No. 12 East Middle Dodge hall. We were down to look at it last fall. It has sunlight on three sides and the most beautiful view you ever saw. He will belong to the Slappa Kidd fraternity—his father's, you know—and play fullback on the football team, of course. After graduation he is to enter the diplomatic service, beginning as secretary to the legation at Paris. We decided on all these things long ago."—Life.

Giving Away the Bride.

An archaism of the English marriage service which has fallen into disuse is, "Who giveth this woman away?" It is a relic of the days when a woman could be donated by her father or her brothers as property.

It is related that at a wedding in California many years ago when the clergyman said, "Who giveth this woman away?" a sepulchral voice from the body of the audience replied, "I could, but I won't!"—Los Angeles Times.

BRAINERD PEOPLE

PRAISE SIMPLE MIXTURE

Many in Brainerd praise the simple mixture of buckthorn bark, glycerine, etc., known as Adler-I-ka. This remedy is the most THOROUGH bowel cleanser ever sold being even used successfully in appendicitis. ONE SPOONFUL relieves almost ANY CASE of constipation, sour or gassy stomach. ONE MINUTE after you take it the gasses rumble and pass out. Adler-I-ka cannot gripe and the INSTANT action is surprising. Johnson's Pharmacy.—Adv't.

Prevention of Infantile Paralysis

(U. S. Public Health Service)

To control the present epidemic of infantile paralysis, according to a statement issued by the United States Public Health Service today, the chain of infection between persons harboring germs of the disease and the well members of the community should be broken. Infantile paralysis is probably caused by a very minute organism found in the nasal, mouth and bowel discharges of those who have the disease or who are carriers of the germ without themselves suffering from the ailment. All of the steps in the spread of the infection are not known but if this germ can be prevented from passing from the infected to the well person, the disease will cease.

Infantile paralysis is not a disease of recent origin. Sporadic or scattered cases have occurred throughout the country for many years but it is only during the last decade that the infection has assumed epidemic proportions of the United States. The present epidemic in New York city, on account of its magnitude and virulence, has awakened the residents of many communities to the danger of the importation of the disease into their own midst. This danger is real, but if due precautions are exercised it is believed that the epidemic will subside.

The actual control of the present epidemic must be left to the city, state and federal health authorities. These organizations will properly quarantine and care for affected persons, prescribe sanitary measures and limit as may be necessary the travel of individuals in order to protect neighboring districts from the infection. Individuals and communities, however, can do much toward their own protection.

Poliomyelitis is probably spread directly or indirectly, through the medium of infective secretions. Account must therefore be taken by communities of every means by which such secretions are disseminated. Promiscuous expectoration should be controlled. The common drinking cup affords a method for the interchange of material of this nature and should therefore be abolished. Rigid cleanliness of glasses and utensils at soda fountains, in saloons and other public places should be enforced. Flies, roaches and other vermin, by coming in contact with infective secretions, may possibly convey them to our food and thus directly bring about the development of disease. Therefore eliminate insects. Street and house dust bear a definite relation to the spread of many infections and it is not unreasonable to presume that they must be a factor in the dissemination of infantile paralysis. Maintain strict cleanliness of streets, yards and alleys in order to prevent the breeding of insects and other vermin. See that all garbage and waste are properly cared for and collected at regular and frequent intervals. Guard all food supplies, especially milk and other perishable products. Digestive troubles of children arising from the ingestion of food of questionable quality may lower resistance. Assemblies of children in infected localities are to be discouraged, if not actually forbidden. While the above measures are in a sense general, and applicable to many epidemic diseases, their importance should not be overlooked.

Individual preventive measures may be thus summarized: Summon a physician at once and immediately notify the health officer of the presence of the disease. If the disease is present in the community, medical aid should be sought whenever a child is sick no matter how light the illness; many cases of infantile paralysis begin with a slight indisposition. Should the illness prove to be infantile paralysis isolate the patient, place a competent person in charge, and reduce all communication with the sick room to a minimum. Hospital care is preferable, not only for the child but in order to better safeguard against the spread of the disease. The sick room should be well ventilated and screened. Nasal and mouth secretions should be received in cloths, placed in a paper bag, and burned. The clothing of the child, the bed linen, and the excretions should be disinfected in the same manner as for typhoid fever, that is by boiling, the long continued application of 5% carbolic, or other well recognized disinfectant. The same is true for dishes and drinking vessels. Nurses should exercise the same precautions as regards cleanliness of hands in caring for infantile paralysis patients as for those afflicted with other infectious diseases.

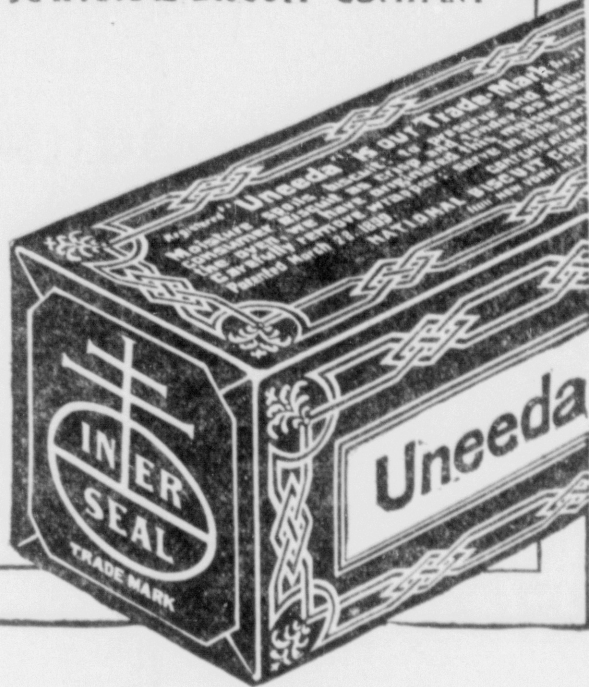

A child may convey the disease to

NO better way to satisfy an enthusiastic appetite than with Uneeda Biscuit. A delightful food, as appetizing as it is nourishing and wholesome. Perfect baking, perfect protection, they come to you with oven-freshness.

others even after a lapse of several weeks. For this reason quarantine should be maintained for a considerable period, usually from six to eight weeks, and the above precautions should be adhered to during this time. Disinfection of the room following recovery is advisable.

NEGLECTED SILO FIRE

Is a Serious Menace on the Farm, Says State Fire Marshal R. W. Hargadine, of St. Paul

A neglected silo is one of the most dangerous structures on the farm says R. W. Hargadine, state fire marshal.

The fire marshal is desirous of warning all farmers not to allow ensilage to remain too long confined. It develops an alcohol which not only is hard to combat, but it is a serious menace to those called upon to extinguish a silo fire.

Robert Carmichael, Dakota county farmer, and member of the legislature, had a serious experience with his silo that should be a warning to all farmers.

It was a wooden silo and contained over 200 tons of 1914 ensilage. July 3rd he discovered fire ensuing from the top, and upon investigation found fire all through the center from top to bottom. Sixty neighbors, working for 24 hours, helped him extinguish the blaze, and it was only by wetting down and throwing out the contents that the fire was controlled.

"It was the most stubborn blaze I ever saw," said Mr. Carmichael. "A man couldn't work in it but a few minutes before being overcome with fumes and reel about as though drunk. In fact, it was really burning alcohol. Advise farmers not to keep ensilage too long, nor put wet or green hay in a barn. Spontaneous combustion is no myth."

Brown-Luther

Walter R. Brown and Inez B. Luther, were united in matrimony this afternoon at the Congregational parsonage, Rev. G. Phil. Sheridan officiating. The ceremony was witnessed by Miss Ina R. Sheridan and Miss Sarah Robinson.

The Dispatch joins their many friends in best wishes.

Water Colors.

Pigments have been used from the earliest times and are now used by all savages for decorative purposes. But the paint used in Babylon and Nineveh and in Pompeii was composed of pigments mixed not with oil, but with water to which had been added a little glue, egg albumen or perhaps sometimes casein, which is albuminous matter from milk or the gluten from cereal grains. Glue, however, which was well known to the ancient Egyptians, was the most used binding material. Such paints are now known as fresco paints or water colors.

Not All Her Fault.

The new maid was untidy, and the mistress bore with her patiently at first. But on the third day she placed a very unclean dinner plate on the table, and patience broke down.

"Really, Harriet, you might at least see that the plates are clean."

"Well, mum," Harriet rejoined, "I owns to them thumb marks, but that dried mustard was there afore I come."

—London Tit-Bits.

Not Through the Roof.

"We lost our cook yesterday by the gasoline route."

"Do you mean that she poured it on the kitchen fire?"

"No. Another family lured her away by offering her the use of a fine motor-car."—Boston Transcript.

NEW PENSION PLAN

Swift & Co. Have Announced the Gift of \$2,000,000 to Their Employees as Follows

Swift & Co.'s gift of \$2,000,000 in the form of a pension to be distributed under a plan announced by them today is interesting. The announcement of the accumulation of the huge sum during the past six years in the form of a pension fund should be gratifying to the workers in the plants and branch houses in all cities where it was made simultaneously. The plan will become active August 1 and will make 30,000 men and women eligible. In Chicago alone 8,000 persons will come under the plan, which according to the statement of the company is a scheme for awarding faithful service.

The salient points of the plan as outlined in the formal announcement to employees follow:

1. The employees do not contribute to the fund.
2. Income from the \$2,000,000 foundation fund is to be supplemented annually by Swift & Company until the fund is large enough to meet the necessary demands.
3. More than 30,000 employees to benefit by the announcement.
4. Men in the employ of the company twenty-five years, who have reached the age of sixty may be pensioned.
5. Men in the employ of the company twenty-five years and who have reached the age of sixty-five shall be pensioned.

6. Women in service twenty-five years, who have reached the age of fifty may be pensioned.
7. Women in service twenty-five years, who have reached the age of fifty-five shall be pensioned.
8. Employees in service fifteen years and up to twenty-five years, who are permanently incapacitated for work may be pensioned.

9. Pension of those retired on account of age and length of service, or if incapacitated after a service of twenty-five years, but prior to the age of retirement, shall be one-half of the average salary for the five years preceding retirement.
10. Pension of those retiring on account of incapacity after from fifteen to twenty-five years of service shall be computed on a basis of 1 1/2% of the average salary for the five year period preceding retirement, for each year of continuous service.

11. No pension shall be less than \$240 per year.
12. No pension shall be in excess of \$5,000 per year.
13. The widow and children of an eligible employee shall receive one-half of the pension to which an employee shall be entitled at the time of his death.

They All Do.

Mother—Dickie, what do you want for a birthday present? Dickie—I want to be my own boss.

GOPHER STATE'S ROAD FUND WILL DOUBLE

Washington, July 31.—Minnesota's apportionment of funds for building roads under the federal good roads law will be double next year what it was this year. A recent announcement by the secretary of agriculture fixed Minnesota's share at \$142,394,060 for the fiscal year ending June 30, 1917.

The apportionment this year was a share of only \$5,000,000. Next year, Secretary of Agriculture Houston says, it will be \$10,000,000, with an increase of \$5,000,000 annually thereafter for three more years.

Different sums are appropriated for each year and the apportionment must take into consideration the population as shown by the latest available federal census and the mileage of rural delivery and star routes.

ARMY SCHOOL TO REOPEN

Leavenworth Institution Was Closed Latter Part of May.

Leavenworth, Kan., July 31.—Private telegrams received here from Washington said the army service schools at Fort Leavenworth will reopen Sept. 15. They were closed May 28 so that students and instructors could get to the Mexican border.

Ten Thousand See Execution.

Laredo, Tex., July 29.—Santiago Ramirez, former governor of Coahuila and later a Villista general, has been executed on the plaza at Saltillo. Ten thousand saw the execution.

Why are They in the American Army

By William G. SHEPHERD
United Press Staff Correspondent

McAllen, Tex., July 31—Men by the hundreds of thousands whom I have seen in European armies are in the army to fight.

Why are they in the American army? Hit or miss, I laid about me with this question in the New York camps today. These are some of the answers:

Col. Cornelius Vanderbilt—I joined in cold blood. I have always been interested in the army and navy and I felt that I ought to do something, so 15 years ago I tutored for a Lieutenant in the 12th New York and passed.

Maj. Gen. O'Ryan—As a boy I always read military history. I wanted to go to West Point, but couldn't. I went into law, but soon as I could I turned my attention from business. I gravitated to the militia. This is the first time I've ever said it publicly, but for many years I've paid more attention to military affairs than to any other of my concerns.

Joseph Hearn, private in Co. I, 12th New York and Maj. Gen. O'Ryan's orderly—My brother had a row with my father and went away from home. When he came back a year after in a soldier's uniform he was so much better and my father was so happy with the change that he told me to join and I did.

Dr. J. W. Abbott, 77 Washington Square, North, Lieutenant in medical corps—When it looked like trouble in Mexico last May I joined. I didn't want it to go on my record in case of war that I had been forced to help my country.

Maj. R. J. Foster, 177 East End Ave., 12th regiment—I went into the militia 23 years ago for the same reason that my boys are going into it. That is because all my people in all the years back have been in all American wars.

Sergt. A. V. Parke, 555 W. 184th St., Co. E, 71st New York—I went into the militia because I was a runner and liked army athletics.

Louis Cissell, private in Co. E, 71st New York—My brother Roy and I lived in a boarding house at 294 Henry St., Brooklyn, and as we didn't booze we didn't know how to spend our evenings until Al Leahy came to our boarding house from Rockaway and talked militia to us until we both joined.

Al Leahy, 294 Henry St., Private in Co. E, 71st New York—I joined the company because Ed. McIvor, a friend of mine in Rockaway, dragged me to drill one night and that finished me.

Sergt. Ed McIvor, Co. E, 71st New York—I was an athlete and joined because of athletics. Through the militia I got a position of teaching athletics to 500 boys in Rockaway.

Roy Cissell, Battery A, 2nd Field Artillery—I joined because my brother died. Four out of five men in our boarding house came to Texas.

THREE CONDITIONS.

Holiness is an infinite compassion for others.
Greatness is to take the common things of life and walk truly among them.
Happiness is a great love and much serving.—Olive Schreiner.

A TRUCELESS WAR

The Unending Struggle Between the Sea and the Shore.

VICTORIES ON BOTH SIDES.

Sometimes the Ocean Lashes Its Way Through Rocky Cliffs, and Sometimes the Wind and Land Combine to Beat the Billows Back to Defeat.

It is a truceless war that the waters of the world are waging against its lands. John Oliver LaGorce, associate editor of the National Geographic society, has prepared for that institution a study of this striking struggle between the earth and the sea with the shores lines of the world as the far flung theater of war.

After calling attention to the fact that the processes which have transformed the polar regions from dense jungles of tropical growth into lands of perpetual ice and snow, which have brought the tops of mountains to the bottom of the sea and the bottom of the sea to the tops of mountains, are still going on, although the hands upon the face of the clock of geology move so slowly that we cannot perceive their movement, Mr. LaGorce continues:

"Along every coast line on the face of the earth there is perpetual warfare between the land and the sea, with the wind as the shifting line, now throwing its weight into the balance on the one side and now on the other. Here the land is taking the offensive, driving the sea back foot by foot, always with the aid of the wind; there the sea marshals a great drive and eats its way landward slowly and laboriously, but none the less successfully.

"The varying fortunes of this relentless and age long war which neither truce nor treaty will ever bring to an end can be read in the shifting sands of the seashore. At many points along the coast of the northeastern states are found bold cliffs, and the charging sea attacks them with the shot and shell of loose shingle. Some of them, however, are adamant and impenetrable in their frontal fortifications and hold out against the sorest siege, but between them have occurred stretches of softer rock which have been literally pounded to dust by the ocean's heavy artillery, thus permitting flank attacks on the hitherto unconquered defenses.

"Along the southeastern coast, however, the rock bound cliff is the exception and the long stretches of glittering sand the rule. Here the sandy beach reaches out farther and farther into the sea, and the water is thus enabled to penetrate farther and farther into the land because the attack of the sea is usually a frontal movement and that of the land frequently a wedge attack. Thus we can account for the long straight shore on the one hand and the split on the other.

"The formation of the beach immediately guarded by the Cape Henry light is not changing so rapidly as is the case only a few miles on either side because of its somewhat protected position, due to the many sand bars or reefs far out from shore which, acting as the first trenches, serve to break the charge of the white horses of Father Neptune as they dash in from the ocean, and, because of this knowledge of defense, it is plain to be seen that a good quarter of a mile of beach has been added by the defender since the old light was erected.

"Rockaway beach, Long Island, grows westward at the rate of nearly a mile every twenty years. At Sag

Head, N. C., the land has extended into the sea at the rate of thirty-five feet a year. In 1891 Dr. Nathaniel Bowditch prepared a chart of Salem and Marblehead harbors, giving the soundings over various ledges of rock. Ninety years later similar soundings were taken, and in all cases the water was found to be considerably deeper, once again telling the tale of endless warrings.

"On the shore of Cape Cod, near Chatham, the land is retreating at the rate of a foot a year, and on the southern shore of Martha's Vineyard it is giving up the fight to the enemy at the rate of three feet every twelve months, while on the southern face of Nantucket the retreat has been as much as six feet a year, the records tell us.

"In its incessant warfare against the land the sea literally takes its captured hosts and makes them do battle under its command. The bowlders that are shattered from the face of a cliff are dashed up against it again and again, hammering others loose, the while being worn round and smooth as the projectile of big guns must be. As the process goes on these huge shells are worn down and crumbled until there remains nothing to tell the story of forced fighting against their own stronghold save grains of sand on some distant beach or the soft carpet spread upon the floor of the sea many fathoms deep.

"How rapidly this process goes on is sometimes strikingly shown. A schooner laden with bricks is beached on some bare shore in a storm. These bricks are rolled and tumbled a distance of five miles or so in the course of a year, and by that time attrition has usually completed its work. Authorities say that on the shores of Cape Ann a fragment of stone as big as a nail keg has been worn completely round by its constant turning during the course of but five years."

Stecher Sidesteps.

It appears that Joe Stecher, the scissoring demon, is not as anxious for a trade with Frank Gotch as he had led people to believe. Gene Melady of Omaha recently offered Stecher 30 per cent of the gate to meet Gotch, but as soon as Stecher found that Gotch had signed the articles for 40 per cent he refused to meet the champion unless he got as much as Gotch did. All of which would seem to indicate that Stecher is not feverishly eager for a contest with Gotch.

Jack Dillon, Giant Killer.

Jack Dillon of Indianapolis, who recently outpointed Frank Moran at New York, is five feet seven and a half inches in height and weighed at ring side 160 pounds. Moran is six feet one inch and weighed 204½ pounds. Moran received \$25,000 for his end, Dillon \$15,000. Dillon's real name is Ernest Cutler Price.

Under Obligation.

"That man Jones backed me into a corner last night and kept me there two hours telling me the bright things his two-year-old boy has said."

"Gosh! You must owe Jones an awful lot of money if you'll stand for that!"—St. Louis Post-Dispatch.

Contrary to Precedent.

"The speaker seems to be an unusually modest man."

"What makes you think so?"

"He makes all his promises in the first person plural and all his excuses in the first person singular."—Birmingham Age-Herald.

A Specialist.

"Mary, have you cemented the handle on the water pitcher you dropped yesterday?"

"Well, mum, I started to, but I dropped the cement bottle."—Puck.

IN THE WORLD OF SPORT

Nick Cullop, Yankees' Great Southpaw.

Photo by American Press Association.

Norman A. Cullop, commonly known as Nick, star pitcher of the New York Americans, is the real sensation of the baseball season. After his start on May 11 Cullop won nine games without a loss. Among the notable feats performed by Cullop this season are the following: He has defeated the White Sox three times, allowing them only fourteen hits in twenty-seven innings. In a game at Detroit Nick fanned Ty Cobb twice in succession. Though left handers are supposed to lack control, Cullop has given only fifteen passes in seventy-seven innings, averaging less than two per game. In one game against Washington Cullop registered nine strike outs, and in a game against the White Sox he got eight on strikes. Nick played with the Feds last year.

Wyckoff Wears Red Sox.

J. Weldon Wyckoff, who was recently released to the Boston Red Sox by Connie Mack, went to the Athletics from Bucknell college in 1913. It is just one year ago that Mack turned down an offer of \$15,000 for this same Wyckoff. At that time the Tigers were in the fight for the pennant and needed pitchers. Wyckoff and Bush were just the men Jennings wanted, and he worked hard for a few days trying to persuade Mack to separate himself from his speed marvel. But to all Hughey's appeals the American league sage turned a deaf ear, for it was upon Wyckoff that he depended to be the foundation of his 1916 pitching staff. But Wyckoff has failed miserably this year and did not win a game for Connie.

How She Did Hate Him!

The acme of personal dislike seems to have been reached in an advertisement that appeared lately in the personal column of the London Times. Here it is:

JAMES A.—Please understand that were we the last two persons on earth and I found myself on the same continent that contained you I should—emigrate.

Let nothing shocking to eyes or ears approach those doors that close upon your child.—Juvenal.

SHERIFF'S SALE
State of Minnesota, County of Crow Wing, ss. District Court. Plaintiff vs. Defendant.
Notice is hereby given, That by virtue of an Execution to me directed and delivered, and now in my hands, issued out of the District Court, Fifteenth Judicial District, State of Minnesota, in and for the County of Crow Wing, upon a Judgment rendered in said Court in favor of Charles L. Blair and against William A. Guth, I have levied upon the following described real estate situated in the County of Crow Wing and State of Minnesota, to-wit: The Northeast one quarter of the Northeast one-quarter of section numbered Eleven (11), Township Forty-six (46), North, Range Twenty-nine (29), West of the 4th P. M. according to the United States Government survey thereof, the title to said real estate being registered under the provision of Chapter 65 of the Revised Laws of the State of Minnesota for the year 1905 and the acts amendatory thereof and supplemental thereto and the certificate of title being numbered No. 5 and recorded on page No. 5 in Vol. No. 1, of the Register of Titles in the office of the Registrar of Titles in and for said Crow Wing County.
And that I shall on Saturday the 26th day of August A. D. 1916, at the hour of two o'clock P. M. of said day, at the West front door of the Court House in the City of Brainerd in said County and State, proceed to sell all the right, title and interest of the above named William A. Guth in and to the above described property, to satisfy said judgment, amounting to Eight Thousand Three Hundred and Forty Dollars (\$8,340.00) together with all accruing costs of sale, and interest on the same from the 5th day of July 1916, at the rate of six per cent per annum, at Public Auction, to the highest bidder for cash.
CLAUDE A. THEORIN, Sheriff Crow Wing Co., Minn.
W. H. CROWELL AND WILL A. BLANCHARD, Plaintiff's Attorneys.
Dated Brainerd, Minnesota, July 8th, 1916.

A TRUCELESS WAR

The Unending Struggle Between the Sea and the Shore.

VICTORIES ON BOTH SIDES.

Sometimes the Ocean Lashes Its Way Through Rocky Cliffs, and Sometimes the Wind and Land Combine to Beat the Billows Back to Defeat.

It is a truceless war that the waters of the world are waging against its lands. John Oliver LaGorce, associate editor of the National Geographic society, has prepared for that institution a study of this striking struggle between the earth and the sea with the shores lines of the world as the far flung theater of war.

After calling attention to the fact that the processes which have transformed the polar regions from dense jungles of tropical growth into lands of perpetual ice and snow, which have brought the tops of mountains to the bottom of the sea and the bottom of the sea to the tops of mountains, are still going on, although the lands upon the face of the clock of geology move so slowly that we cannot perceive their movement, Mr. LaGorce continues:

"Along every coast line on the face of the earth there is perpetual warfare between the land and the sea, with the wind as the shifting line, now throwing its weight into the balance on the one side and now on the other. Here the land is taking the offensive, driving the sea back foot by foot, always with the aid of the wind; there the sea marshals a great drive and eats its way landward slowly and laboriously, but none the less successfully.

"The varying fortunes of this relentless and age long war which neither truce nor treaty will ever bring to an end can be read in the shifting sands of the seashore. At many points along the coast of the northeastern states are found bold cliffs, and the charging sea attacks them with the shot and shell of loose shingle. Some of them, however, are adamant and impenetrable in their frontal fortifications and hold out against the sorest siege, but between them have occurred stretches of softer rock which have been literally pounded to dust by the ocean's heavy artillery, thus permitting bank attacks on the hitherto unconquered defenses.

"Along the southeastern coast, however, the rock bound cliff is the exception and the long stretches of glittering sand the rule. Here the sandy beach reaches out farther and farther into the sea, and the water is thus enabled to penetrate farther and farther into the land because the attack of the sea is usually a frontal movement and that of the land frequently a wedge attack. Thus we can account for the long straight shore on the one hand and the split on the other.

"The formation of the beach immediately guarded by the Cape Henry light is not changing so rapidly as is the case only a few miles on either side because of its somewhat protected position, due to the many sand bars or reefs far out from shore which, acting as the first trenches, serve to break the charge of the white horses of Father Neptune as they dash in from the ocean, and, because of this knowledge of defense, it is plain to be seen that a good quarter of a mile of beach has been added by the defender since the old light was erected.

"Rockaway beach, Long Island, grows westward at the rate of nearly a mile every twenty years. At Nag

Head, N. C., the land has extended into the sea at the rate of thirty-five feet a year. In 1891 Dr. Nathaniel Bowditch prepared a chart of Salem and Marblehead harbors, giving the soundings over various ledges of rock. Ninety years later similar soundings were taken, and in all cases the water was found to be considerably deeper, once again telling the tale of endless warrings.

"On the shore of Cape Cod, near Chatham, the land is retreating at the rate of a foot a year, and on the southern shore of Martha's Vineyard it is giving up the fight to the enemy at the rate of three feet every twelve months, while on the southern face of Nantucket the retreat has been as much as six feet a year, the records tell us.

"In its incessant warfare against the land the sea literally takes its captured hosts and makes them do battle under its command. The bowlders that are shattered from the face of a cliff are dashed up against it again and again, hammering others loose, the while being worn round and smooth as the projectile of big guns must be. As the process goes on these huge shells are worn down and crumbled until there remains nothing to tell the story of forced fighting against their own stronghold save grains of sand on some distant beach or the soft carpet spread upon the floor of the sea many fathoms deep.

"How rapidly this process goes on is sometimes strikingly shown. A schooner laden with bricks is beached on some bare shore in a storm. These bricks are rolled and tumbled a distance of five miles or so in the course of a year, and by that time attrition has usually completed its work. Authorities say that on the shores of Cape Ann a fragment of stone as big as a nail keg has been worn completely round by its constant turning during the course of but five years."

Stecher Sidesteeps.

It appears that Joe Stecher, the scis-sion demon, is not as anxious for a title with Frank Gotch as he had led people to believe. Gene Melady of Omaha recently offered Stecher 30 per cent of the gate to meet Gotch, but as soon as Stecher found that Gotch had signed the articles for 40 per cent he refused to meet the champion unless he got as much as Gotch did. All of which would seem to indicate that Stecher is not feverishly eager for a contest with Gotch.

SHERIFF'S SALE

State of Minnesota, County of Crow Wing, District Court. Plaintiff

vs. Defendant.

William A. Guith. Given. That by virtue of an Execution to me directed and delivered, and now in my hands, issued out of the District Court, Fifteenth Judicial District, State of Minnesota, in and for the County of Crow Wing, upon a Judgment rendered in said Court in favor of Charles L. Blair and against William A. Guith, I have levied upon the following described real estate of said defendant, to-wit: An undivided one-sixteenth interest in fee simple of and in the following described real estate situated in the County of Crow Wing and State of Minnesota, to-wit: The Northwest one quarter of the Northeast one-quarter of section numbered Eleven (11), Township Forty-six (46), North, Range Twenty-nine (29), West of the 4th P. M. according to the United States Government survey thereof, the title to said real estate being registered under the provision of Chapter 65 of the Revised Laws of the State of Minnesota for the year 1905 and the acts amendatory thereof and supplemental thereto and the certificate of title being numbered No. 5 and recorded on page No. 5 in Vol. No. 1 of the Register of Titles in the office of the Registrar of Titles in and for said Crow Wing County.

And that I shall on Saturday the 26th day of August A. D. 1916, at the hour of two o'clock P. M. of said day at the West front door of the Court House in the City of Brainerd in said County and State, proceed to sell all the right, title and interest of the above named William A. Guith in and to the above described property, to satisfy said judgment, amounting to Eight Thousand Three hundred and Forty Dollars (\$8,340.00) together with all accruing costs of sale, and interest on the same from the 5th day of July 1916, at the rate of six per cent per annum, at Public Auction, to the highest bidder for cash.

CLAUS A. THEORIN, Sheriff Crow Wing Co. Minn.

Brainerd, Minus its Captain, Fred Cook Defeats St. Paul Professional Team in Fast Game

GOULD PITCHES FOR LOCALS

Brainerd Bunched Hits When Needed and Solved "Cannonball" Jackson's Delivery

Brainerd, minus its captain, Fred Cook, played the Colored Giants of St. Paul, a professional team, Sunday afternoon, and defeated them 3 to 2 in a fast game featured by the work of the new local battery, Gould and Tanner, of Little Falls.

Noel played first base acceptably. Brainerd bunched hits when needed and solved "Cannonball" Jackson's delivery. The latter struck out 8, but in critical times his support failed. It took three umpires, Bert Kylo, Cliff Russell and Taylor, the Giants roaring about the decision of Russell, who was replaced by Taylor.

Russell was right and was backed by the crowd. It happened in the fifth inning with Brainerd to bat. Benda, playing off first, made for the bag when threatened and whirled around the giant first baseman, getting there safely before he could apply the ball. With three on bases, Bowman hit a short bingle in the infield. Pitcher Jackson ran for the ball, whirled around, saw everything, running the path, and whipped the ball to the catcher to nail Templeton. He threw wide of the plate and Davis could not recover in time to bag the fleeing runner. Result one run in the fifth.

In the fourth Benda got to first on a fumble of the shortstop, made second when Tanner was given a pass, and scored on an overthrow to home plate. Tanner made third on the same overthrow. Gould's hit scoring Tanner.

The colored men made their tallies of one each in the first and second innings. Ramsey got a hit, stole second, went to third on a passed ball and home on Marshall's sacrifice.

In the second Jones hit safely, stole second, and scored on Hick's hit.

It was one of the fastest games on the local diamond and the crowd was right there with the applause. Every good play, either side, won the fans' approval.

After the umpire incident Cyrus Olson, manager, talked to the grand stand and claimed he was not getting a square deal. However, nobody cared to argue with him in the hot weather.

In the fifth the colored men had a great chance to score. With three men on bases, long legged Third Baseman Marshall struck out.

The score by innings:

Colored Giants 110 000 000—2

Brainerd 000 210 00x—3

INSPECTING ROADS

County Chairman John A. Erickson, and Commissioner John A. Oberg at Ft. Ripley

J. A. Erickson, chairman of the board of county commissioners and John A. Oberg, the Deerwood commissioner, are at Fort Ripley inspecting the judicial highway between Morrison and Crow Wing counties. This is the final examination.

FROM CARNIVAL CITY MAKES \$697.65

Gross Receipts for Park Board Were \$789.65, Expenses Paid Out \$92.00

ANIMAL SHOW WAS WINNER

Best Night July 26 Receipts \$876.10, Lowest Record July 28 With \$462.60

The gross receipts for the city from the C. A. Wortham carnival was \$789.65. The expenses paid were \$92. The city's net receipts were \$697.65.

On the first night, July 24, the Athletic show was highest with receipts of \$83.90, the animal show next with \$72.35.

On July 25 the animal show recorded \$123.00. The animal show retained its lead on all following nights.

Gross receipts of the carnival follow:

July 24	\$ 584.40
July 25	659.45
July 26	876.10
July 27	616.95
July 28	462.60
July 29	798.15

Total\$3,997.65

The park board percentage of this was \$599.65, concessions \$175, cleaning streets \$15, total \$789.65.

BRAINERD'S ODDEST STORIES TODAY

"I've been reading all about that mosquito hound that turned out to be a chicken dog," said Clyde Parker to John Sivertson. "Is he a good pointer?"

"No," said Sivertsen, "he's a disappointment."

Down at the yard offices of the N. P. they say Victor Rounds got some free rides by carrying water for the horses on the merry-go-round.

W. E. Lively was nearly killed in his own back yard when he forgot it was Monday morning and collided with a wire clothes line, skinned the bridge of his nose and almost closing both eyes.

S. P. Randall is a proud man today. He caught a 5 pound bass in Gilbert lake and he brought the evidence right to the Dispatch office to back up his word.

AUTOMOBILE ACCIDENTS

Ralph Sleeper Struck by Automobile, Grabs Lapins, Saves Himself—Another Collision

Ralph Sleeper, accidentally struck by the automobile of Armour Thayer at Seventh and Laurel streets Saturday afternoon, grabbed radiator and lamps and hung on as he was dragged. He escaped with bruises and a gash in the wrist. The young man is employed as a clerk by B. C. McNamara.

The Ford of Dr. J. M. Ekrem and the Lakeside Lumber Co. truck collided at a corner in the business section and the Ford lost the spokes of its front wheels.

PREDICTS BIG CROPS

A. M. Cleland, General Passenger Agent of Northern Pacific Railway, is Optimistic

A. M. Cleland, general passenger agent for the Northern Pacific railway, with headquarters in St. Paul, was in Duluth Saturday and predicted bumper crops for this section of the country and said indications point to a record yield of grain. This, coupled with other signs, point to increased prosperity for the north-west, he declared.

HOT WEATHER RECORD

Back of the Heat Wave Melted on Sunday, and the Night was Comparatively Cool

With but two cool days in July, the month will pass into history as the hottest July Crow Wing county experienced in the last twenty years. The high point in the heat wave was reached July 29 when the government thermometer at Gull lake shot up to 95.

The next day it subsided to the maximum of 85. Cooler weather is anticipated with occasional showers, as rain is needed for the growing crops. Corn in the county took a jump and hopped from the backward stage of a late season to normal condition.

JOKER IN FEDERAL LAW

Any Resident of Indian Territory Having Liquor in Possession in Danger of Jail Sentence (Duluth Herald)

What appears to be a joker in a Federal law passed last May in connection with the department of Indian affairs is causing the United States government endless expense and bringing about the arrest of hundreds of persons for violating the liquor laws.

The substance of the new law is that it shall be a violation of the Federal statutes to have in one's possession intoxicating liquor in territory within the jurisdiction of an Indian treaty. Liquor cannot be obtained even for medicinal purposes without the prescription of a physician.

"The new law catches 'em coming and going," said a Federal official today. "If liquor is found in a man's possession he is guilty of violating the law unless he can prove somebody else put the liquor in his possession without his knowledge or consent. Then the law has hold up on another person."

"It has been customary for a good many people in dry territory to secure small quantities of liquor for home use, but this practice now makes one a law violator."

"Under ordinary circumstances congress might be willing to adjust the Federal liquor laws and leave the problem to the city or county, but Eastern congressmen, as a rule, have no idea of conditions in Indian territories and would not think of abrogating a treaty."

In view of the fact that the law is now so stringent and that Judge Morris has announced that he will send all future violators to a Federal prison, fewer violations of the laws are expected in the future.

The present session of the Federal court will be one of the most expensive ever held in Duluth. Out of 108 indictments nearly 100 were liquor cases, and a vast number of witnesses have been necessary. Men have been called from points as far away as Omaha, Neb., and it has

cost as much as \$60 or \$70 to secure a few words of testimony.

The Herald terms the section a "joker", but it was retained in the law through the efforts of Senator Clapp, after an open discussion in the senate.

THE WORLD OF TRADE

Brainerd Merchants Lively in Seeking Trade, Auto Sales are Increasing Daily

W. E. Lively sold a gasoline engine and pump to R. Laflamme, of South Long Lake.

Wm. Graham sold a piano to the C. A. Wortham carnival company to be used in the Pike's Peak show.

The Brainerd Electric Co. has received a lot of fine electric percolators, chafing dishes, etc.

Rosko Brothers have sold a big Paige car to H. W. Linnemann and a Dodge car to George Donant.

The Woodhead Motor Co. will soon announce a bit of news in motor lines which will astonish the trade. They have been selling the biggest lot of Fords of any dealer in central Minnesota.

The E. R. Smith Auto Co. is now being managed by L. S. Smith, of Minneapolis, a nephew of E. R. and James R. Smith. At the drawing Saturday, the Buick went to the 323rd man, the lucky ticket being No. 688 and held by John A. Berg, bookkeeper of the Motor Inn, Little Falls.

D. M. Clark & Co. are selling lots of garden hose.

Minnesota farm machinery is being placed all over Crow Wing county with great satisfaction to buyer and seller by the Slipp-Gruehagen Co.

The Sherlund Co. has the contract for plumbing and heating in the H. E. Kundert bungalow on the north side.

The Electric Shop of Maple street has the contract wiring, etc at the big hotel in Manganese and several residences.

JOKER IN FEDERAL LAW

Any Resident of Indian Territory Having Liquor in Possession in Danger of Jail Sentence (Duluth Herald)

What appears to be a joker in a Federal law passed last May in connection with the department of Indian affairs is causing the United States government endless expense and bringing about the arrest of hundreds of persons for violating the liquor laws.

The substance of the new law is that it shall be a violation of the Federal statutes to have in one's possession intoxicating liquor in territory within the jurisdiction of an Indian treaty. Liquor cannot be obtained even for medicinal purposes without the prescription of a physician.

"The new law catches 'em coming and going," said a Federal official today. "If liquor is found in a man's possession he is guilty of violating the law unless he can prove somebody else put the liquor in his possession without his knowledge or consent. Then the law has hold up on another person."

"It has been customary for a good many people in dry territory to secure small quantities of liquor for home use, but this practice now makes one a law violator."

"Under ordinary circumstances congress might be willing to adjust the Federal liquor laws and leave the problem to the city or county, but Eastern congressmen, as a rule, have no idea of conditions in Indian territories and would not think of abrogating a treaty."

In view of the fact that the law is now so stringent and that Judge Morris has announced that he will send all future violators to a Federal prison, fewer violations of the laws are expected in the future.

The present session of the Federal court will be one of the most expensive ever held in Duluth. Out of 198 indictments nearly 100 were liquor cases, and a vast number of witnesses have been necessary. Men have been called from points as far away as Omaha, Neb., and it has

cost as much as \$60 or \$70 to secure a few words of testimony.

The Herald terms the section a "joker", but it was retained in the law through the efforts of Senator Clapp, after an open discussion in the senate.

THE WORLD OF TRADE

Brainerd Merchants Lively in Seeking Trade, Auto Sales are Increasing Daily

W. E. Lively sold a gasoline engine and pump to R. Laflamme, of South Long Lake.

Wm. Graham sold a piano to the C. A. Wortham carnival company to be used in the Pike's Peak show.

The Brainerd Electric Co. has received a lot of fine electric percolators, chafing dishes, etc.

Rosko Brothers have sold a big Paige car to H. W. Linnemann and a Dodge car to George Donant.

The Woodhead Motor Co. will soon announce a bit of news in motor lines which will astonish the trade. They have been selling the biggest lot of Fords of any dealer in central Minnesota.

The E. R. Smith Auto Co. is now being managed by L. S. Smith, of Minneapolis, a nephew of E. R. and James R. Smith. At the drawing Saturday, the Buick went to the 223rd man, the lucky ticket being No. 688 and held by John A. Berg, bookkeeper of the Motor Inn, Little Falls.

D. M. Clark & Co. are selling lots of garden hose.

Minnesota farm machinery is being placed all over Crow Wing county with great satisfaction to buyer and seller by the Shipp-Gruenhagen Co.

The Sherlund Co. has the contract for plumbing and heating in the H. E. Kundert bungalow on the north side.

The Electric Shop of Maple street has the contract wiring, etc at the big hotel in Manganese and several residences.

RIVERTON

Riverton, Minn., July 31—Carrie and Nora Barron, Lillian Stearns

FACTORY SALE

Packard and Bond Pianos

Special Reduced Prices

Mr. H. M. Hulme of the Packard Factory will be here to assist in closing out one carload direct from the factory. Why not have the best Piano in the world. You waste good money by investing in an inferior grade.

WM. GRAHAM

210 So. 6th St. N. W. Phone 617-J Brainerd, Minnesota

Stearns and Norma McDonald returned from school at St. Cloud this week.

Frank Andrews was in Pine River over Sunday.

Mrs. Alfred Williams was in Deerwood recently.

Mrs. Fessler of Minneapolis, is visiting her son Charles here.

Mrs. Ed Kidder and children were in Crosby Monday.

Ed Kidder and Asa Spicer were in Brainerd Sunday.

Mr. and Mrs. Kinney of Motley, visited their son, Earl.

Anna Larkin of Aitkin visited her sister, Mrs. John Hasskamp.

Mrs. James McPartland went to St. Paul Tuesday.

A. H. Edwards and family and Harry Wood and family attended the carnival in Brainerd this week.

Mrs. Ed Mengus visited in Crosby recently.

Florence Richardson of Brainerd is visiting her brother, Royal.

Charles Hanson and Florence Hill were married in Brainerd July 19.

Mrs. A. I. Williams was taken to Crosby Thursday for an operation for appendicitis.

Louise O'Grin is visiting her sister in Brainerd.

LOST—A Bible in East Brainerd containing the name Peter Brown. Return 615 Fourth Ave. 49t3

LOST—Two bunches of keys, 12 or more, on small chain. Return Dispatch office for reward. 47t3p

LOST—At Lum park July 20, a man's brown coat. Finder please return to C. Swindell, 821 Mill street and be rewarded. 41tf

WANTED—I have customers for residence property and vacant lots. List your property for sale with Jas. R. Smith, Sleeper block. 223tf

LOST—\$15 in bills, a \$5 and a \$10, between O'Brien's store and the N. P. ice house on Laurel and Sixth. Return to Houghton's jewelry store for reward. 48t3

Expert Advice For the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

then rub down with a rubbing stone and water. Then another coat of this primer should be put on and the procedure repeated. Following this rubbing the surface should resemble a slate in smoothness. You are now ready for the ground color, which is a flat color put on to give a foundation for the color varnish. It should, of course, be of a shade to correspond with the desired final appearance of the car. Then a coat of color varnish is applied, and after dry the rubbing with rubbing stone and water is again in order. Finally put on a coat of clear finishing varnish that is of the right shade to correspond with the color. This is a lengthy procedure and, of course, could be simplified if you did not want a very fine finish. However, if the above directions are followed the metal surfaces should look like new.

My magneto does not distribute a very strong fire to the plugs. At times I can start the motor easily; then, again, I have a hard time starting it. Can you tell me what is the matter?

Probably the magnets have become weak. Take the magneto to a repair man who knows how to do the work and have the magnets renewed. If there is no shop in your town where this can be done ship the magneto to the factory.

What causes sparks to appear in the brush holder assembly when the throttle is opened about halfway? Is this harmful to the generator?

The sparks probably originate from a dirty commutator or from improper brush adjustment. This should be remedied at once.

I have been having brake trouble due to too small brake drums. The drums are only 12 1/2 by 2 inches and are much too small for a 3,000 pound car. I want to equip it with 16 by 2 or 2 1/2 brakes if it is possible to obtain a pair of this size drums bored for two inch hubs. I can do the fitting and think I can work over the old brake connections without much expense. What do you think of this plan?

It would be entirely practical to do this, although we do not know where you could get such a set of drums already made. It is probable that you would have to have them made to your order. Remember that you do not want to get them so large that they will interfere with the road clearance of the car.

Do you recommend removing carbon while the engine is running by means of warm water slowly fed through a primer connected to the intake manifold?

We do not believe that this would have very beneficial results, although it would do no harm. Warm water would not serve to dislodge much of the deposit.

What is a universal joint, and what is its use?

A universal joint is a connector between two shafts, allowing them to operate at any angle to one another with in practical limitations.

Would it be practical to build a two cylinder opposed stationary engine with both cylinders firing at the same time?

It would not be practical, although it could be done. By having both cylinders fire at the same time you would have the same effect as a single cylinder engine of a size equal to the sum of the two cylinders, and then this impulse would have to carry the engine through two revolutions. So the cylinders should be arranged to fire alternately in order that there be an impulse every revolution. By firing both at once you simply defeat the purpose for which you have two cylinders.

What is the meaning of brake horsepower and piston displacement?

Brake horsepower is that measured at the flywheel of the motor and is the useful work done by it. Piston displacement is the total cubical area of the cylinders between the head of the pistons, when at their lowest point, and the top of the cylinders.

Is kerosene a practical substitute for water in the radiator hose connections?

Kerosene alone in the cooling system soon would cause overheating of the motor. Besides, dangerous gases would be generated, and no doubt the water connections, if made of rubber, would be affected. Kerosene mixed with water in the proportions of two-thirds water and one-third kerosene has been tried, but the results obtained were not as good as with alcohol and water.

Will you kindly describe the process of lapping piston rings in cylinders?

In the factories the piston rings are lapped in on the pistons, and in most cases this simply means the running of the engine for several hours by external power. Usually a belt from an overhead drive shaft is placed over the flywheel and the engine driven thus until all parts are run in. Lapping the rings in a repair shop should be done in the same way. Assemble them on the pistons and while using a good supply of oil drive the motor by external power for several hours if possible.

taking out one shim from each side of the cap first. Then see if this is not enough to permit of tightening up the cap so as to remove the play. If one shim from each side will not do it try taking two, etc. You must be careful not to tighten the bearings so that they bind. Do not try to turn the heads off the bolts in doing it, but set them up with reasonable snugness.

Do aluminum alloy pistons have the wearing qualities of iron?

Long tests have been carried out by car manufacturers using them, and they must have been entirely satisfied with the wearing qualities as compared with iron to warrant their using these pistons. The alloy is of a composition calculated to resist wear satisfactorily.

How do you calculate the proper size radiator of the tubular type for a 3 by 4 four cylinder motor?

The number of cubic inches radiator capacity required per horsepower largely depends on the construction of the radiator, the same radiator capacity not being used in cellular types that has been adopted in tubular. In fact, tubular radiators have not all the same water capacity because of the different cooling coefficients of them, due to the more or less effective radiating fins or flanges carried on the tubes. For a four cylinder motor with five inch bore and stroke the method used in determining its radiator capacity needed is as follows: Multiply the cylinder diameter by the piston stroke by the number of cylinders. In this case it is 100, and 100 linear feet of three-fourths inch tubing is used for such a motor. Should the tubing be three-eighths inch then 200 feet are needed. One foot of the three-fourths inch tubing has 210 square inches of cooling area on the spiral fins, and one foot of the three-eighths inch tubing has 124 square inches cooling area. This gives practically 20,000 square inches cooling area for a 5 by 5 four cylinder motor, which, according to the formula rating, would be forty horsepower.

This carried still further would give practically 500 square inches of radiating area per horsepower. From another point of view the 100 feet three-quarter inch tubing would contain 520.04 cubic inches of water, which works out practically thirteen cubic inches per horsepower. If the radiator is of the cellular construction different figures apply.

How often should carbon be cleaned out of the cylinders of an automobile motor?

In a new motor it should not be necessary to clean out the carbon more than once in 3,000 miles. As the motor becomes older and the piston rings wear, forming an oil seal which is less tight, more oil works its way into the combustion chamber, with the result that carbonization is more frequent and cleaning will have to be resorted to more often. The estimate of 3,000 miles is a very liberal one, as there are many new cars which run 5,000 or 6,000 miles without carbon trouble. As a general rule, it is a good plan to clean out the carbon when the valves are ground. The two operations can be performed at the same time because, with the valve caps removed or with the cylinder head taken off, as is done in some motors, the combustion chambers are accessible and can easily be scraped out.

What is magnalium, and how does it compare with cast iron for weight and tensile strength?

Magnalium is the trade name of an alloy of aluminum and magnesium. It is much lighter than cast iron, which has a specific gravity range of from 5 to 7, approximately. Magnalium has a specific gravity of 2.5, so it runs at least 50 per cent lighter than cast iron. Ordinary cast iron for motor pistons runs 18,000 to 20,000 pounds tensile strength and magnalium about 23,000 pounds.

What is the pressure per square inch on a three inch piston head at time of explosion, and how long would the pressure last if no outlet was supplied?

The pressure per square inch on a three inch piston may have any value within limits. The size of the combustion chamber, the temperature, the volume of gas taken, etc., are all factors. If no outlet is allowed and the temperature is kept constant at the time of explosion, the pressure will be constant. Any change in temperature will change the pressure.

What is the proper way to find out if there is any lost motion between the driving pinion and crown gear?

The best way is to remove the cover plate from the differential housing and clean off the gears so that the action in the assembly can be noted. Leave both wheels on the ground and place the gear shift lever in neutral. By means of a pipe wrench a firm hold should be taken on the propeller shaft and with the hand on the large crown gear the propeller shaft moved backward and forward. Any lost motion between the shaft and the crown gear can then be readily noted.

DECIDED VICTORY IS SURE TO COME

Party That Elects President Will Also Rule in House.

DIVISION SEEMS IMPOSSIBLE

If Hughes Wins With Small Majority It Is Likely That Democrats Will Retain Control of Senate, but They Will Lose the House—If Wilson Wins, Both Will Remain Democratic.

By ARTHUR W. DUNN.

Washington, July 28.—[Special.]—The house will go with the presidency in the coming election. It is idle to talk about one party electing the president and the other the house of representatives.

It is quite possible that the Republicans could elect the president and lose the senate, for they would have to make tremendous gains and carry a number of doubtful states to secure control of the senate. But if Wilson is re-elected the senate and house will be Democratic. If Hughes is elected the house will be Republican. And if there should be a landslide against the Democrats the Republican might regain control of the senate.

Once, when the Republicans sent the president after a long contest before an electoral commission, the house was Democratic. But that is not a case for precedent. In 1888, when Cleveland had a plurality of the popular vote of only 98,000 and the Republicans won by carrying New York with a small plurality, the house was Republican also.

Local Point of View.

Senator Works of California made a powerful argument against "the preparedness craze" and asserted that there was no danger of any nation attacking the United States, even going so far as to show that war with Japan was not possible. Then came a time when he offered an amendment to the naval bill providing that a fleet should be located on the Pacific coast, and in giving his reasons for the amendment he said that he believed there were no questions with Japan that could not be settled by peaceful means, "but," and the venerable senator became an earnest Californian, "we may not be able to settle our difficulties with Japan by peaceful means. There is greater reason for supposing we shall have trouble with Japan than with any other nation."

Congress and the Round Robin.

"Whoop! la! Do any of you boys know what a round robin is? Did any of you ever get one?"

The youngest old man in congress was making a speech. Some one answered the inquiry by saying, "Every day," and Uncle Joe Cannon went on:

"Every day? I expect everybody gets them. They come from the capitalists and plutocrats and the laboring men and everybody except the farmer. The farmer is one-third of the population. I do not think I have had a single request from a farmer in my district. The farmer is busy with his crops, but everybody else seems to be organized and pouring in requests of different kinds."

Then the ex-speaker went on to describe some of the many round robins which people were sending to congress demanding all sorts of legislation.

Speed Is Expensive.

Those who listened to all that was said about the navy during the long debate in the senate learned several things. One of them was incited by Senator Lodge.

"Speed," said the Massachusetts senator, "is expensive; indeed, it is the most expensive thing connected with a ship. That is why the lightly armored battle cruiser is more expensive than the heavily armored dreadnaught. It is the additional speed which adds to the expense of the ship."

Williams Remembered.

Senator Kenyon wanted a resolution considered to investigate the cost of living in the District of Columbia, and John Sharp Williams objected. This led Kenyon to ask Williams if he thought it worth while to have investigations in the cost of living anywhere in the country.

"Frankly, I do not," replied the Mississippi senator. He no doubt remembered a number of investigations and inquiries on this subject, all of which amounted to nothing.

A Moot Question.

Not having much else to do on a hot day the senate took up the subject as to whether congress could direct the president to handle the army and navy in a certain way. This involved a constitutional question and gave the constitutional lawyers a fine chance to talk. Like many other similar questions, it was not settled.

One Cent Postage.

Postmaster General Burleson told the postmasters assembled in Washington that if the present prosperity continued in the country there might be one cent postage in the near future. No one ever doubted that Burleson was a politician. He knew that it was a mighty good time to get in a little non-political talk which would have good political effect, and so he spoke of one cent postage and the present prosperity and general good times and what the administration was doing. And he never let on that he was a politician.

ASKS PLEA FOR CASEMENT

Senate Overturns Report of Its Committee.

Washington, July 29.—By a vote of 46 to 19 the senate adopted a resolution requesting President Wilson to transmit the British government an expression of hope that it would exercise clemency in the treatment of Irish political prisoners.

By this action the senate overturned the report of a majority of its foreign relations committee against seeking clemency for Sir Roger Casement and followed a course outlined in a minority report made by Chairman Stone and Senators O'Gorman and Pittman. The minority report requested an expression of humanitarian interest by the senate.

READY FOR DASH TO SEA

Submarine Deutschland May Sail at Any Moment.

Baltimore, July 31.—Although the German submarine Deutschland still was at her pier here developments during the past twenty-four hours indicated the intention of Captain Paul Koeng, her commander, to leave in a short time.

The tug Thomas F. Timmons, which conveyed the submarine from the capes just three weeks ago, got up steam and it was said arrangements had been made to take on a pilot at short notice.

Very Lucky Escape.

"Bomb throwing," says an English writer, "like many other aspects of war, has its humorous side, and I have seen a whole trench helpless with laughter at the sight of two men running opposite ways to avoid a sausage bomb from a German trench mortar. They collided and sat down facing each other, like vaudeville comedians. The bomb dropped between them, almost touching them both—and then failed to explode."

It should, of course, be of a shade to correspond with the desired final appearance of the car. Then a coat of color varnish is applied, and after dry the rubbing with rubbing stone and water is again in order. Finally put on a coat of clear finishing varnish that is of the right shade to correspond with the color. This is a lengthy procedure and, of course, could be simplified if you did not want a very fine finish. However, if the above directions are followed the metal surfaces should look like new.

My magneto does not distribute a very strong fire to the plugs. At times I can start the motor easily; then, again, I have a hard time starting it. Can you tell me what is the matter?

Probably the magnets have become weak. Take the magneto to a repair man who knows how to do the work and have the magnets renewed. If there is no shop in your town where this can be done ship the magneto to the factory.

What causes sparks to appear in the brush holder assembly when the throttle is opened about halfway? Is this harmful to the generator?

The sparks probably originate from a dirty commutator or from improper brush adjustment. This should be remedied at once.

I have been having brake trouble due to too small brake drums. The drums are only 12 1/2 by 2 inches and are much too small for a 3,000 pound car. I want to equip it with 16 by 2 or 2 1/2 brakes if it is possible to obtain a pair of this size drums bored for two inch hubs. I can do the fitting and think I can work over the old brake connections without much expense. What do you think of this plan?

It would be entirely practical to do this, although we do not know where you could get such a set of drums already made. It is probable that you would have to have them made to your order. Remember that you do not want to get them so large that they will interfere with the road clearance of the car.

Do you recommend removing carbon while the engine is running by means of warm water slowly fed through a primer connected to the intake manifold?

We do not believe that this would have very beneficial results, although it would do no harm. Warm water would not serve to dislodge much of the deposit.

What is a universal joint, and what is its use?

A universal joint is a connector between two shafts, allowing them to operate at any angle to one another within practical limitations.

Would it be practical to build a two cylinder opposed stationary engine with both cylinders firing at the same time?

It would not be practical, although it could be done. By having both cylinders fire at the same time you would have the same effect as a single cylinder engine of a size equal to the sum of the two cylinders, and then this impulse would have to carry the engine through two revolutions. So the cylinders should be arranged to fire alternately in order that there be an impulse every revolution. By firing both at once you simply defeat the purpose for which you have two cylinders.

What is the meaning of brake horsepower and piston displacement?

Brake horsepower is that measured at the flywheel of the motor and is the useful work done by it. Piston displacement is the total cubical area of the cylinders between the head of the pistons, when at their lowest point, and the top of the cylinders.

Is kerosene a practical substitute for water in the radiator of a car? Would it rot the rubber hose connections?

Kerosene alone in the cooling system soon would cause overheating of the motor. Besides, dangerous gases would be generated, and no doubt the water connections, if made of rubber, would be affected. Kerosene mixed with water in the proportions of two-thirds water and one-third kerosene has been tried, but the results obtained were not as good as with alcohol and water.

Will you kindly describe the process of lapping piston rings in cylinders?

In the factories the piston rings are lapped in on the pistons, and in most cases this simply means the running of the engine for several hours by external power. Usually a belt from an overhead drive shaft is placed over the flywheel and the engine driven thus until all parts are run in. Lapping in the rings in a repair shop should be done in the same way. Assemble them on the pistons and while using a good supply of oil drive the motor by external power for several hours if possible.

taking out one shim from each side of the cap first. Then see if this is not enough to permit of tightening up the cap so as to remove the play. If one shim from each side will not do it try taking two, etc. You must be careful not to tighten the bearings so that they bind. Do not try to turn the heads off the bolts in doing it, but set them up with reasonable snugness.

Do aluminum alloy pistons have the wearing qualities of iron?

Long tests have been carried out by car manufacturers using them, and they must have been entirely satisfied with the wearing qualities as compared with iron to warrant their using these pistons. The alloy is of a composition calculated to resist wear satisfactorily.

How do you calculate the proper size radiator of the tubular type for a 3 by 4 four cylinder motor?

The number of cubic inches radiator capacity required per horsepower largely depends on the construction of the radiator, the same radiator capacity not being used in cellular types that has been adopted in tubular. In fact, tubular radiators have not all the same water capacity because of the different cooling coefficients of them, due to the more or less effective radiating fins or flanges carried on the tubes. For a four cylinder motor with fire inch bore and stroke the method used in determining its radiator capacity needed is as follows: Multiply the cylinder diameter by the piston stroke by the number of cylinders. In this case it is 100, and 100 linear feet of three-fourths inch tubing is used for such a motor. Should the tubing be three-eighths inch then 200 feet are needed. One foot of the three-fourths inch tubing has 210 square inches of cooling area on the spiral fins, and one foot of the three-eighths inch tubing has 124 square inches cooling area. This gives practically 20,000 square inches cooling area for a 5 by 5 four cylinder motor, which, according to the formula, would be forty horsepower. This carried still further would give practically 500 square inches of radiating area per horsepower. From another point of view the 100 feet three-quarter inch tubing would contain 520.4 cubic inches of water, which works out practically thirteen cubic inches per horsepower. If the radiator is of the cellular construction different figures apply.

How often should carbon be cleaned out of the cylinders of an automobile motor?

In a new motor it should not be necessary to clean out the carbon more than once in 3,000 miles. As the motor becomes older and the piston rings wear, forming an oil seal which is less tight, more oil works its way into the combustion chamber, with the result that carbonization is more frequent and cleaning will have to be resorted to more often. The estimate of 3,000 miles is a very liberal one, as there are many new cars which run 5,000 or 6,000 miles without carbon trouble. As a general rule, it is a good plan to clean out the carbon when the valves are ground. The two operations can be performed at the same time because, with the valve caps removed or with the cylinder head taken off, as is done in some motors, the combustion chambers are accessible and can easily be scraped out.

What is magnalium, and how does it compare with cast iron for weight and tensile strength?

Magnalium is the trade name of an alloy of aluminum and magnesium. It is much lighter than cast iron, which has a specific gravity range of from 5 to 7, approximately. Magnalium has a specific gravity of 2.5, so it runs at least 50 per cent lighter than cast iron. Ordinary cast iron for motor pistons runs 18,000 to 20,000 pounds tensile strength and magnalium about 23,000 pounds.

What is the pressure per square inch on a three inch piston head at time of explosion, and how long would the pressure last if no outlet was supplied?

The pressure per square inch on a three inch piston may have any value within limits. The size of the combustion chamber, the temperature, the volume of gas taken, etc., are all factors. If no outlet is allowed and the temperature is kept constant at the time of explosion, the pressure will be constant. Any change in temperature will change the pressure.

What is the proper way to find out if there is any lost motion between the driving pinion and crown gear?

The best way is to remove the cover plate from the differential housing and clean off the gears so that the action in the assembly can be noted. Leave both wheels on the ground and place the gear shift lever in neutral. By means of a pipe wrench a firm hold should be taken on the propeller shaft and with the hand on the large crown gear the propeller shaft moved backward and forward. Any lost motion between the shaft and the crown gear can then be readily noted.

DECIDED VICTORY IS SURE TO COME

Party That Elects President Will Also Rule in House.

DIVISION SEEMS IMPOSSIBLE

If Hughes Wins With Small Majority It Is Likely That Democrats Will Retain Control of Senate, but They Will Lose the House—If Wilson Wins, Both Will Remain Democratic.

By ARTHUR W. DUNN.

Washington, July 28.—[Special.]—The house will go with the presidency in the coming election. It is idle to talk about one party electing the president and the other the house of representatives.

It is quite possible that the Republicans could elect the president and lose the senate, for they would have to make tremendous gains and carry a number of doubtful states to secure control of the senate. But if Wilson is re-elected the senate and house will be Democratic. If Hughes is elected the house will be Republican. And if there should be a landslide against the Democrats the Republican might regain control of the senate.

Once, when the Republicans sent the president after a long contest before an electoral commission, the house was Democratic. But that is not a case for precedent. In 1888, when Cleveland had a plurality of the popular vote of only 98,000 and the Republicans won by carrying New York with a small plurality, the house was Republican also.

Local Point of View.

Senator Works of California made a powerful argument against "the preparedness craze" and asserted that there was no danger of any nation attacking the United States, even going so far as to show that war with Japan was not possible. Then came a time when he offered an amendment to the naval bill providing that a fleet should be located on the Pacific coast, and in giving his reasons for the amendment he said that he believed there were no questions with Japan that could not be settled by peaceful means, "but," and the venerable senator became an earnest Californian, "we may not be able to settle our difficulties with Japan by peaceful means. There is greater reason for supposing we shall have trouble with Japan than with any other nation."

Congress and the Round Robin.

"Whoop! Do any of you boys know what a round robin is? Did any of you ever get one?"

The youngest old man in congress was making a speech. Some one answered the inquiry by saying, "Every day," and Uncle Joe Cannon went on: "Every day? I expect everybody gets them. They come from the capitalists and plutocrats and the laboring men and everybody except the farmer. The farmer is one-third of the population. I do not think I have had a single request from a farmer in my district. The farmer is busy with his crops, but everybody else seems to be organized and pouring in requests of different kinds."

Then the ex-speaker went on to describe some of the many round robins which people were sending to congress demanding all sorts of legislation.

Speed Is Expensive.

Those who listened to all that was said about the navy during the long debate in the senate learned several things. One of them was inculcated by Senator Lodge.

"Speed," said the Massachusetts senator, "is expensive; indeed, it is the most expensive thing connected with a ship. That is why the lightly armored battle cruiser is more expensive than the heavily armored dreadnaught. It is the additional speed which adds to the expense of the ship."

Williams Remembered.

Senator Kenyon wanted a resolution considered to investigate the cost of living in the District of Columbia, and John Sharp Williams objected. This led Kenyon to ask Williams if he thought it worth while to have investigations in the cost of living anywhere in the country.

"Frankly, I do not," replied the Mississippi senator. He no doubt remembered a number of investigations and inquiries on this subject, all of which amounted to nothing.

A Moot Question.

Not having much else to do on a hot day the senate took up the subject as to whether congress could direct the president to handle the army and navy in a certain way. This involved a constitutional question and gave the constitutional lawyers a fine chance to talk. Like many other similar questions, it was not settled.

One Cent Postage.

Postmaster General Burleson told the postmasters assembled in Washington that if the present prosperity continued in the country there might be one cent postage in the near future. No one ever doubted that Burleson was a politician. He knew that it was a mighty good time to get in a little non-political talk which would have good political effect, and so he spoke of one cent postage and the present prosperity and general good times and what the administration was doing. And he never let on that he was a politician.

ASKS PLEA FOR CASEMENT

Senate Overturns Report of Its Committee.

Washington, July 29.—By a vote of 46 to 19 the senate adopted a resolution requesting President Wilson to transmit the British government an expression of hope that it would exercise clemency in the treatment of Irish political prisoners.

By this action the senate overturned the report of a majority of its foreign relations committee against seeking clemency for Sir Roger Casement and followed a course outlined in a minority report made by Chairman Stone and Senators O'Gorman and Pittman. The minority report requested an expression of humanitarian interest by the senate.

READY FOR DASH TO SEA

Submarine Deutschland May Sail at Any Moment.

Baltimore, July 31.—Although the German submarine Deutschland still was at her pier here developments during the past twenty-four hours indicated the intention of Captain Paul Koeng, her commander, to leave in a short time.

The tug Thomas F. Timmons, which conveyed the submarine from the capes just three weeks ago, got up steam and it was said arrangements had been made to take on a pilot at short notice.

Very Lucky Escape.

"Bomb throwing," says an English writer, "like many other aspects of war, has its humorous side, and I have seen a whole trench helpless with laughter at the sight of two men running opposite ways to avoid a sausage bomb from a German trench mortar. They collided and sat down facing each other, like vaudeville comedians. The bomb dropped between them, almost touching them both—and then failed to explode."

Her Left Side Hurt

Mrs. Laura Beall, Plattsburg, Miss., writes: "Last April I got in bad health; my left side hurt all the time. I had symptoms of Bright's disease. I took Foley Kidney Pills and feel all right now." They quickly relieve backache, rheumatism, aches and pains. Bladder troubles, too, are corrected by this remedy. H. P. Dunn, druggist.—Adv't. mwf
